

How To Setup Ubuntu On VMware

Step by Step guide to setup Ubuntu on VMware

Credit By: k4n0ng

Requirement:

- VMware Workstation
- Ubuntu ISO file

Open Our VMware:

New Virtual Machine Wizard

Guest Operating System Installation
A virtual machine is like a physical computer; it needs an operating system. How will you install the guest operating system?

Install from:

☐ Installer disc:
No drives available

☐ Installer disc image file (iso):
C:\Users\Nin Kanong\Downloads\Win11_23H2_Englis Browse...

☒ I will install the operating system later.
The virtual machine will be created with a blank hard disk.

New Virtual Machine Wizard

Select a Guest Operating System
Which operating system will be installed on this virtual machine?

Guest operating system

☐ Microsoft Windows

☒ Linux

☐ VMware ESX

☐ Other

Version
Ubuntu 64-bit

New Virtual Machine Wizard

Name the Virtual Machine
What name would you like to use for this virtual machine?

Virtual machine name:

Ubuntu VM

Location:

C:\Users\Nin Kanong\Documents\Virtual Machines\Ubuntu VM

Browse...

The default location can be changed at Edit > Preferences.

New Virtual Machine Wizard

Specify Disk Capacity
How large do you want this disk to be?

The virtual machine's hard disk is stored as one or more files on the host computer's physical disk. These file(s) start small and become larger as you add applications, files, and data to your virtual machine.

Maximum disk size (GB): 60

Recommended size for Ubuntu 64-bit: 20 GB

☐ Store virtual disk as a single file

☒ Split virtual disk into multiple files

Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks.

After Press Enter

Wait a few minute.

In this we can Skip for Update it latter, but I Update it now.

Wait it a few minute.

After it finished update click **Close Installer:**

Now we got new ubuntu.

Accessibility in Ubuntu

Customise Ubuntu to your needs before you set up. You can change them later in System Settings.

Connect to the internet

An internet connection will improve your installation with compatibility check and extra software packages.

- ☒ Use wired connection
- ☐ No Wi-Fi devices detected
- ☐ Do not connect to the internet

[Back](#)[Next](#)

How would you like to install Ubuntu?

- ☒ **Interactive installation**
For users who want to be guided step by step through the installation.
- ☐ **Automated installation**
For advanced users who have an autoinstall.yaml for consistent and repeatable system setups.

[Back](#)[Next](#)

What apps would you like to install to start with?

**Default selection**

Just the essentials, web browser and basic utilities.

**Extended selection**

An offline-friendly selection of office tools, utilities and web browser.

[Back](#)[Next](#)

Optimise your computer

Install recommended proprietary software?

Ubuntu ships with no proprietary software by default. Installing additional software may improve your computer's performance.

**Install third-party software for graphics and Wi-Fi hardware**

Including but not limited to NVIDIA drivers and similar

**Download and install support for additional media formats**

Including but not limited to MP3, MP4, MOV and similar

[Back](#)[Next](#)

Start from scratch on your selected disk.

None selected

For advanced users seeking customized disk setups.

Ready to go

Finish

Get started with more applications

Ubuntu's App Center has a range of apps you can get started with.

Open App Center

After update it:

- Update system:

sudo apt update && sudo apt upgrade -y

A terminal window titled 'k4n0ng@Ubuntu' showing the execution of 'sudo apt update && sudo apt upgrade -y'. The terminal output includes a password prompt, four 'Hit' messages for security, noble, updates, and backports repositories, and a progress bar for 'Reading package lists... 99%'.

```
Dec 21 23:39
k4n0ng@Ubuntu: ~
To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

k4n0ng@Ubuntu:~$ sudo apt update && sudo apt upgrade -y
[sudo] password for k4n0ng:
Hit:1 http://security.ubuntu.com/ubuntu noble-security InRelease
Hit:2 http://kh.archive.ubuntu.com/ubuntu noble InRelease
Hit:3 http://kh.archive.ubuntu.com/ubuntu noble-updates InRelease
Hit:4 http://kh.archive.ubuntu.com/ubuntu noble-backports InRelease
Reading package lists... 99%
```

- Install VMware Tools

sudo apt install open-vm-tools open-vm-tools-desktop -y

sudo reboot

```
k4n0ng@Ubuntu:~$ sudo apt install open-vm-tools open-vm-tools-desktop -y
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
open-vm-tools is already the newest version (2:12.5.0-1~ubuntu0.24.04.2).
open-vm-tools set to manually installed.
open-vm-tools-desktop is already the newest version (2:12.5.0-1~ubuntu0.24.04.2).
The following package was automatically installed and is no longer required:
  libllvm19
Use 'sudo apt autoremove' to remove it.
0 upgraded, 0 newly installed, 0 to remove and 0 not upgraded.
k4n0ng@Ubuntu:~$ reboot
```

➤ Install Build Essentials

sudo apt install -y curl wget git net-tools build-essential

```
k4n0ng@Ubuntu:~$ sudo apt install -y curl wget git net-tools build-essential
[sudo] password for k4n0ng:
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
wget is already the newest version (1.21.4-1ubuntu4.1).
wget set to manually installed.
The following package was automatically installed and is no longer required:
  libllvm19
Use 'sudo apt autoremove' to remove it.
The following additional packages will be installed:
  binutils binutils-common binutils-x86-64-linux-gnu bzip2 dpkg-dev fakeroot g++ g++-13 g++-13-x86-64-linux-gnu g++-x86-64-linux-gnu gcc gcc-13 gcc-13-x86-64-linux-gnu
  gcc-x86-64-linux-gnu git-man libalgorithm-diff-perl libalgorithm-diff-xs-perl libalgorithm-merge-perl libasan8 libbinutils libcc1-0 libctf-nobfd0 libctf0 libdpkg-perl
  liberror-perl libfakeroot libfile-fcntllock-perl libgcc-13-dev libgprofng0 libhwasm0 libitm1 liblsan0 libquadmath0 libstdc++-13-dev libtsan2 libubsan1
  lto-disabled-list make
Suggested packages:
  binutils-doc gprofng-gui bzip2-doc debian-keyring g++-multilib g++-13-multilib gcc-13-doc gcc-multilib autoconf automake libtool flex bison gcc-doc gcc-13-multilib gcc-13-locales
  gdb-x86-64-linux-gnu git-daemon-run | git-daemon-sysvinit git-doc git-email git-gui gitk gitweb git-cvs git-mediawiki git-svn bzr libstdc++-13-doc make-doc
The following NEW packages will be installed:
  binutils binutils-common binutils-x86-64-linux-gnu build-essential bzip2 curl dpkg-dev fakeroot g++ g++-13 g++-13-x86-64-linux-gnu g++-x86-64-linux-gnu gcc gcc-13
  gcc-13-x86-64-linux-gnu gcc-x86-64-linux-gnu git git-man libalgorithm-diff-perl libalgorithm-diff-xs-perl libalgorithm-merge-perl libasan8 libbinutils libcc1-0 libctf-nobfd0
  libctf0 libdpkg-perl liberror-perl libfakeroot libfile-fcntllock-perl libgcc-13-dev libgprofng0 libhwasm0 libitm1 liblsan0 libquadmath0 libstdc++-13-dev libtsan2
  libubsan1 lto-disabled-list make net-tools
0 upgraded, 43 newly installed, 0 to remove and 0 not upgraded.
Need to get 68.4 MB of archives.
```

Now we got successful to Setup Ubuntu on VMware.
