

How To Setup Windows 10 on VMware

Step by step guide to setup Windows 10 on VMware

How to Setup Windows 10 on VMware

Step 1: Install VMware Workstation

- Download & Install VMware

Step 2: Create a New Virtual Machine

- Choose "Create a New Virtual Machine"
- Select "Typical (Recommended)"

Step 3: Insert Windows 10 ISO

- Browse for Windows 10 ISO file
- Select the ISO image

Step 4: Configure VM Settings

- Set RAM, CPU & Disk Size

Step 6: Complete Setup

 **Ready to Use Windows 10 on VMware!**   

Credit By: k4n0ng

Requirements:

- VMware Workstation
- Windows 10 ISO

First open our VMWare:

In this we can input others name different this:

The screenshot shows the 'Name the Virtual Machine' step of the 'New Virtual Machine Wizard'. The title bar says 'New Virtual Machine Wizard' with a close button. The main heading is 'Name the Virtual Machine' with the subtitle 'What name would you like to use for this virtual machine?'. There is a text input field for 'Virtual machine name:' containing 'Win10 Testing'. Below it is a 'Location:' field with the path 'C:\Users\Nin Kanong\Documents\Virtual Machines\Win10 Testi' and a 'Browse...' button. A note states 'The default location can be changed at Edit > Preferences.' At the bottom, there are three buttons: '< Back', 'Next >', and 'Cancel'. A red box highlights the 'Next >' button, and a red arrow points from the 'Virtual machine name' field to it.

In this we can input **Disk Size** more than **40.0**, in this I use for testing so I use 40 GB:

The screenshot shows the 'Specify Disk Capacity' step of the 'New Virtual Machine Wizard'. The title bar says 'New Virtual Machine Wizard' with a close button. The main heading is 'Specify Disk Capacity' with the subtitle 'How large do you want this disk to be?'. A paragraph explains: 'The virtual machine's hard disk is stored as one or more files on the host computer's physical disk. These file(s) start small and become larger as you add applications, files, and data to your virtual machine.' Below this is a 'Maximum disk size (GB):' field with a value of '40.0' and a spinner. A note says 'Recommended size for Windows 10 x64: 60 GB'. There are two radio button options: 'Store virtual disk as a single file' (unselected) and 'Split virtual disk into multiple files' (selected). A red box highlights the 'Split virtual disk into multiple files' option. At the bottom, there are four buttons: 'Help', '< Back', 'Next >', and 'Cancel'. A red arrow points from the 'Maximum disk size (GB)' field to the 'Next >' button.

In this we can just **Double-Click** on our Windows 10 ISO file, or we can **click** on it and **Open**:

In this Network Adapter we can select one on it, but I choose **NAT** that it the stay in the same IP one my VMware:

On this step we can click on it, but if we don't want we can skip it -> After click **Ok**:

In this we just press any key to continue, just take **Mouse** and **Click** on it to make it **hide mouse** after **Press any key (Our Keyboard)**:

After it running to Windows:

Now it start to setup:

Setup is starting

Click on **New** -> Click on **Apply**:

After click **Ok**:

After wait it until it finished install:

After wait a few minute it will show this:

After wait it a few minute:

After it will show this:

In this we can choose which one that we want to use, but in this I select **No** all:

Let Microsoft and apps use your location

Choose your settings, then select 'Accept' to save them. Check the 'Learn more' link for info on these settings, how to change them, how Microsoft Defender SmartScreen works and the related data transfers and uses.

Yes

Get location-based experiences like directions and weather. Let Windows & apps request your location. Microsoft will use location data to improve location services.

No

You won't be able to get location-based experiences like directions and weather or enjoy other services that require your location to work.

[Accept](#)

Send diagnostic data to Microsoft

Choose your settings, then select 'Accept' to save them. Check the 'Learn more' link for info on these settings, how to change them, how Microsoft Defender SmartScreen works and the related data transfers and uses.

Send info about the websites you browse and how you use apps and features, plus additional info about device health, device activity, and enhanced error reporting. Diagnostic data is used to help keep Windows secure and up to date, troubleshoot problems, and make product improvements. Required diagnostic data will always be included when you choose to send Optional diagnostic data. Regardless of your choice, your device will be equally secure and will operate normally.

Send Required diagnostic data

Send only info about your device, its settings and capabilities, and whether it is performing properly. Diagnostic data is used to help keep Windows secure and up to date, troubleshoot problems, and make product improvements. Regardless of your choice, your device will be equally secure and will operate normally.

Let Cortana help you get things done

To do this, Cortana needs access to some of your personal information

To let Cortana provide personalised experiences and relevant suggestions, Microsoft collects and uses information including your location and location history, contacts, voice input, speech and handwriting patterns, typing history, search history, calendar details, content and communication history from Microsoft services, messages and apps. In Microsoft Edge, Cortana uses your browsing history. You can always change these choices in the Notebook and disable Cortana in Microsoft Edge.
