

How to Setup Window 11

Step by step guide to setup Windows 11 on VMware

First Open our VMware:

New Virtual Machine Wizard

Name the Virtual Machine
What name would you like to use for this virtual machine?

Virtual machine name:

Location:

The default location can be changed at Edit > Preferences.

< Back **Next >** Cancel

After set password to encrypt, also in this I input password **k4n0ng123**:

New Virtual Machine Wizard

Encryption Information
How would you like to encrypt this virtual machine?

This Guest OS requires an encrypted Trusted Platform Module to operate.

Your files will be encrypted using a password you must set. This password is stored in the systems credential manager. Keep a copy of the password in a safe place, you can not start this VM without it.

Choose Encryption Type

☐ All the files (.vmdk, .vmx, etc) for this virtual machine are encrypted.

☒ Only the files needed to support a TPM are encrypted. (.nvram, .vmss, .vmem, .vmx, .vmsn)

Password

Confirm Password

☒ Remember the password on this machine in Credential Manager

< Back **Next >** Cancel

In this I input **Maximum disk size (GB):** 64.0

New Virtual Machine Wizard [X]

Specify Disk Capacity
How large do you want this disk to be?

The virtual machine's hard disk is stored as one or more files on the host computer's physical disk. These file(s) start small and become larger as you add applications, files, and data to your virtual machine.

Maximum disk size (GB):

Recommended size for Windows 11 x64: 64 GB

☐ Store virtual disk as a single file

☒ Split virtual disk into multiple files

Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks.

Help < Back **Next >** Cancel

New Virtual Machine Wizard [X]

Ready to Create Virtual Machine
Click Finish to create the virtual machine. Then you can install Windows 11 x64.

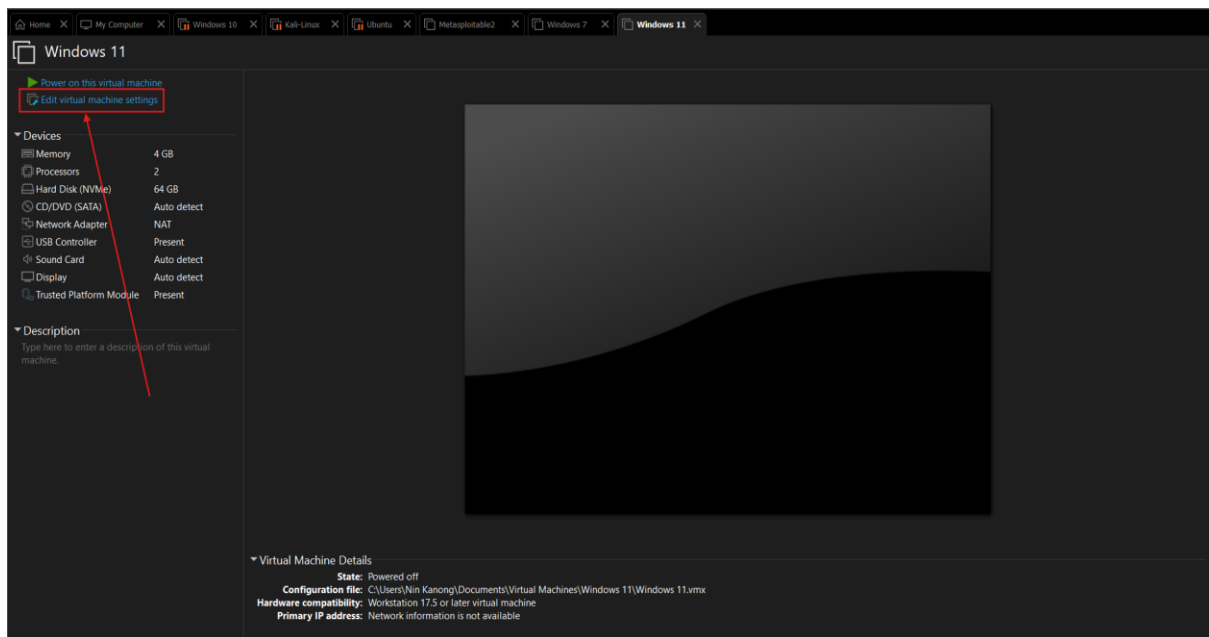

The virtual machine will be created with the following settings:

Name:	Windows 11
Location:	C:\Users\Nin Kanong\Documents\Virtual Machines\Wind...
Version:	Workstation 17.5 or later
Operating System:	Windows 11 x64
Hard Disk:	64 GB, Split
Memory:	4096 MB
Network Adapter:	NAT
Other Devices:	2 CPU cores, CD/DVD, USB Controller, Sound Card

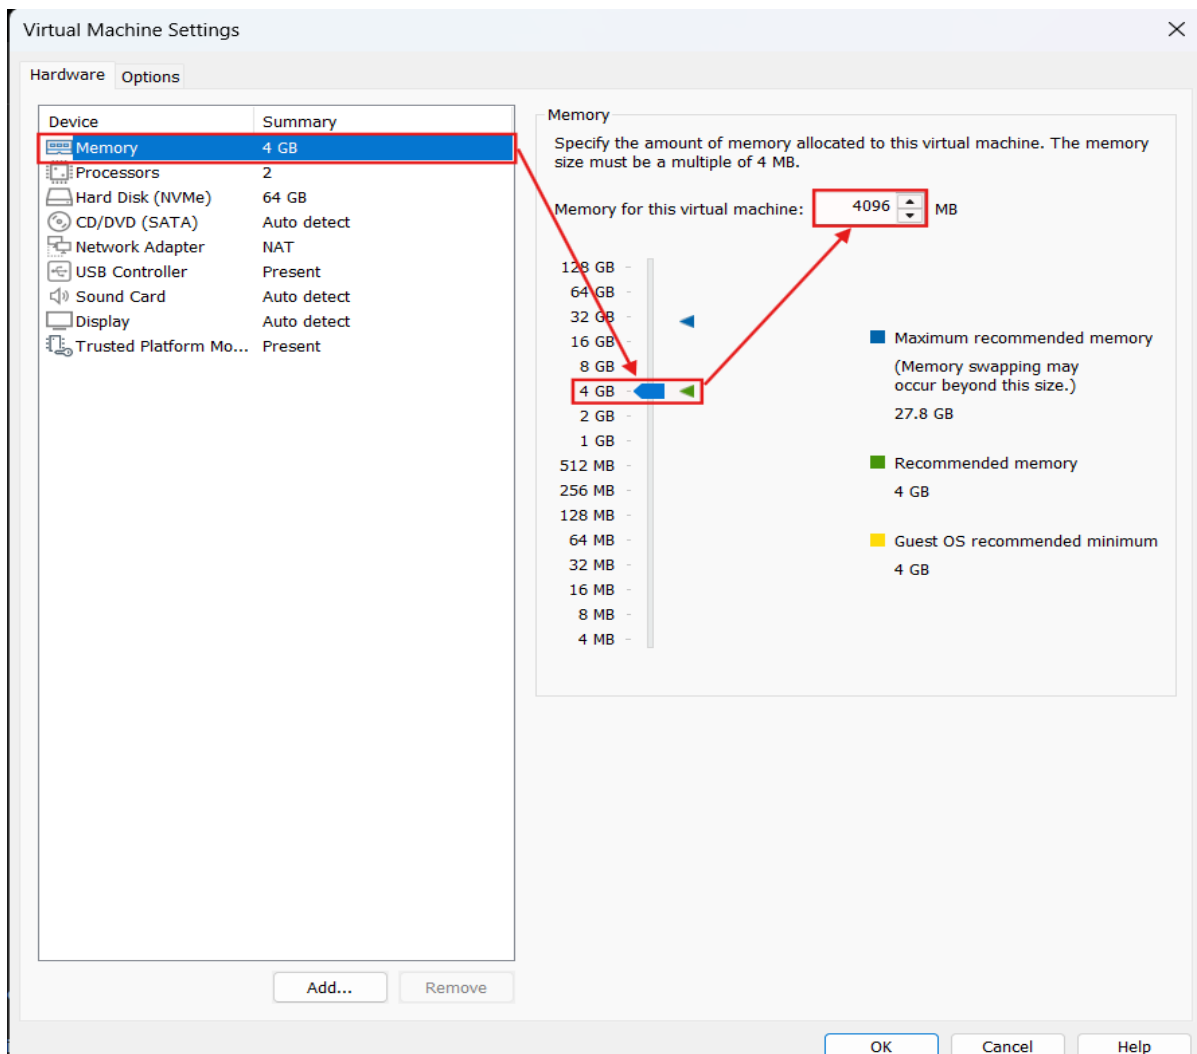

Customize Hardware...

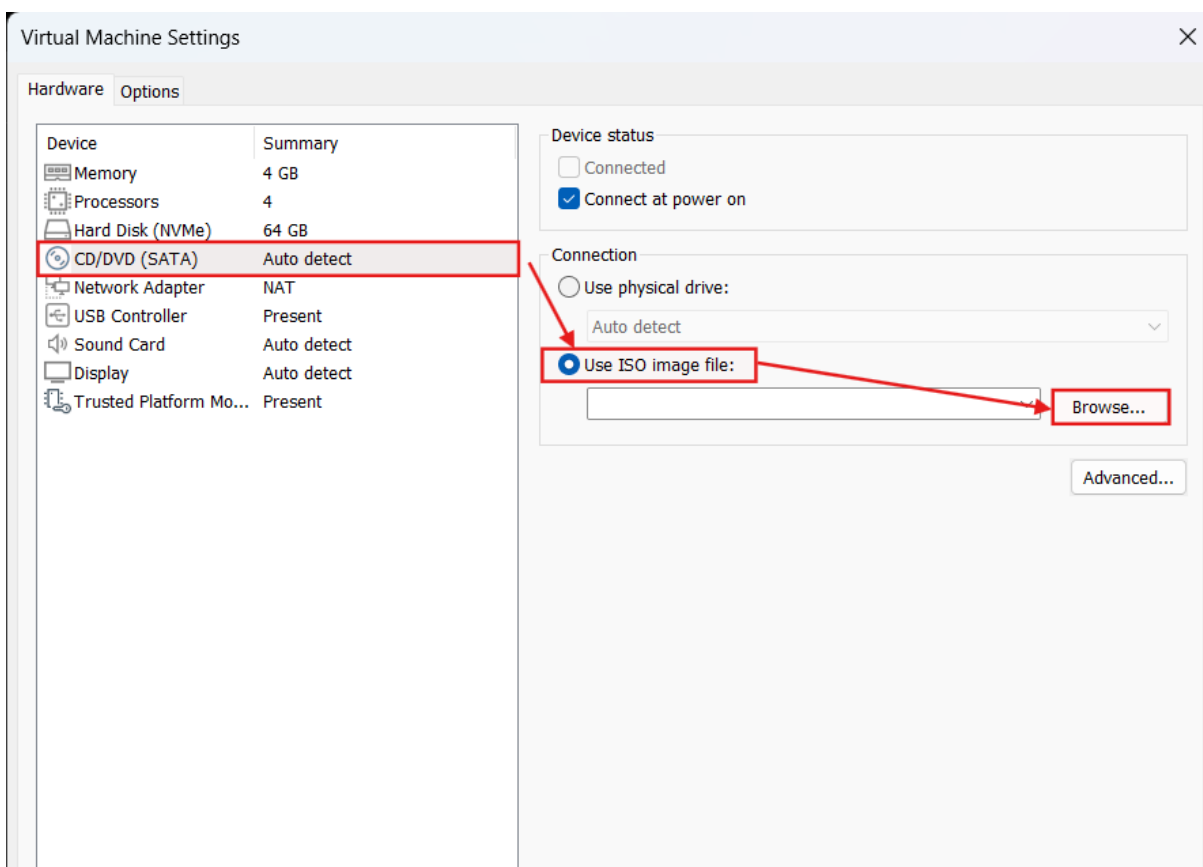

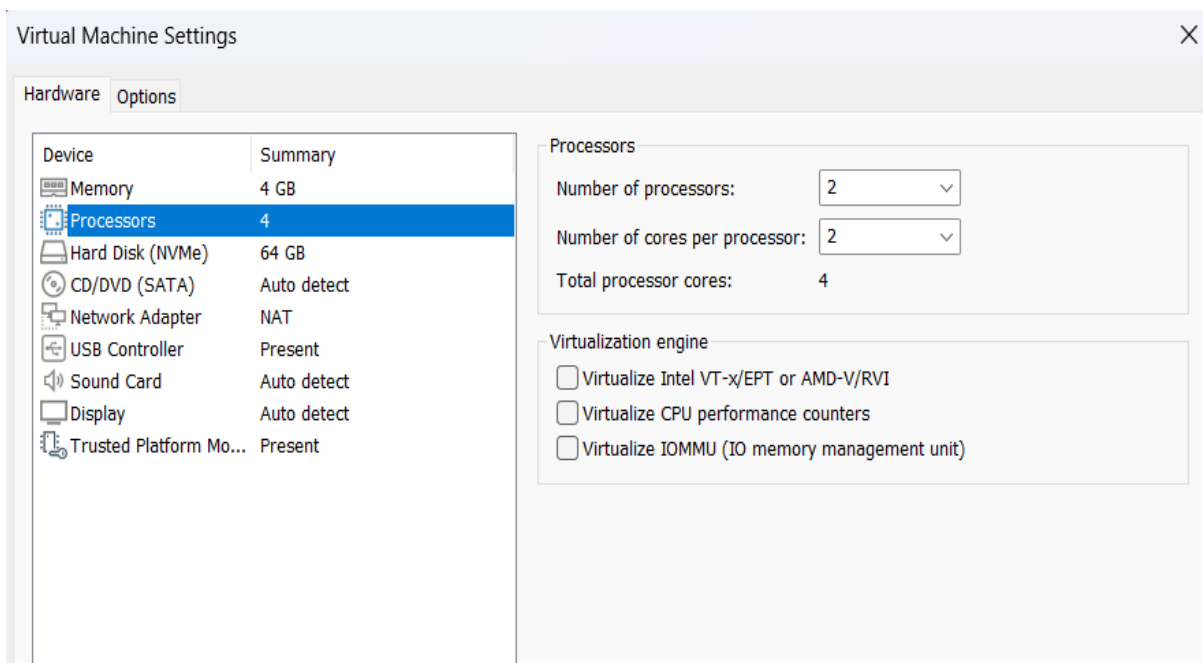

< Back **Finish** Cancel

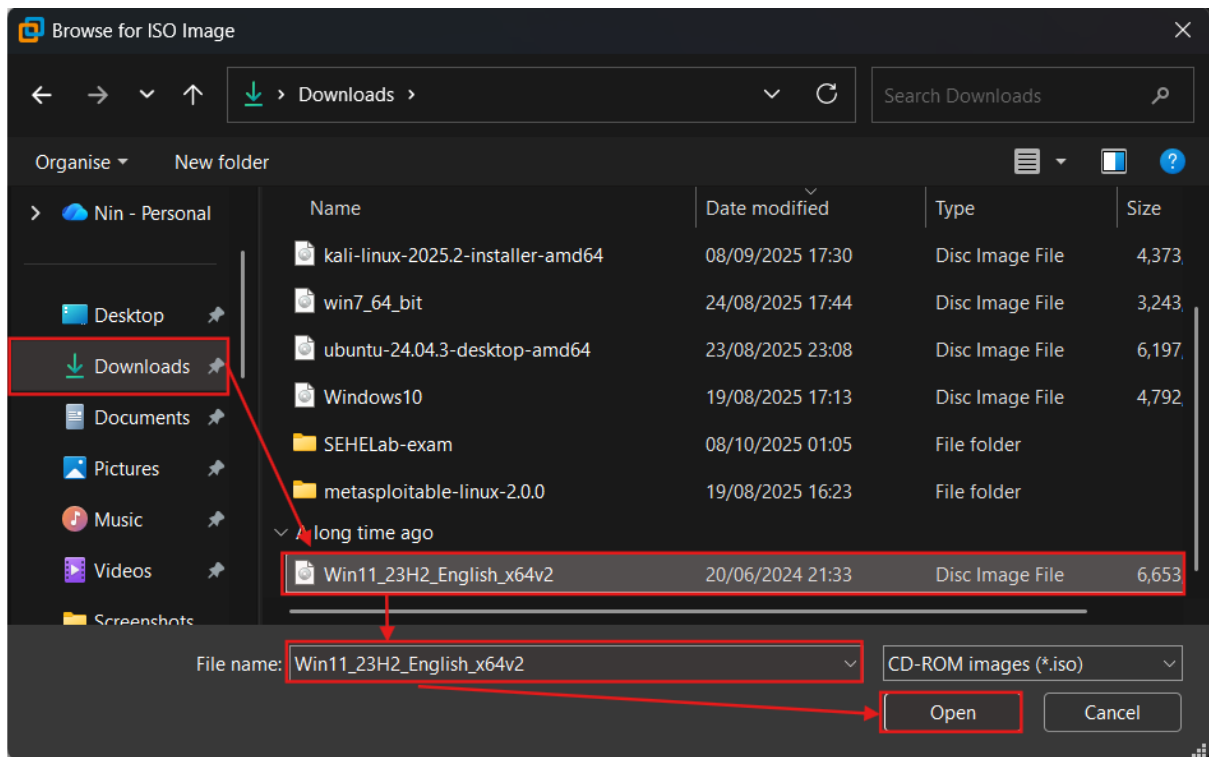

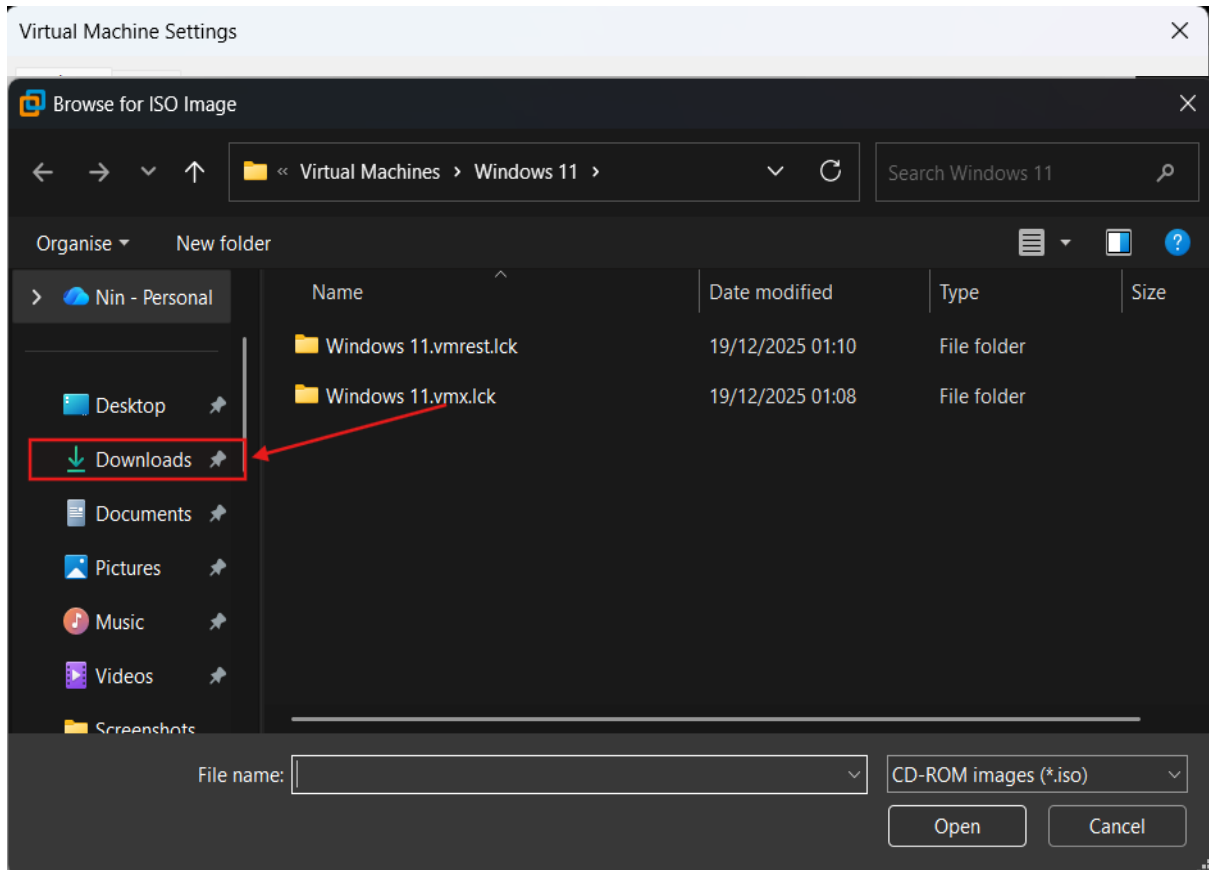

Now we got new windows 11 -> after go to **Edit virtual machine setting:**

In this we can change to others:

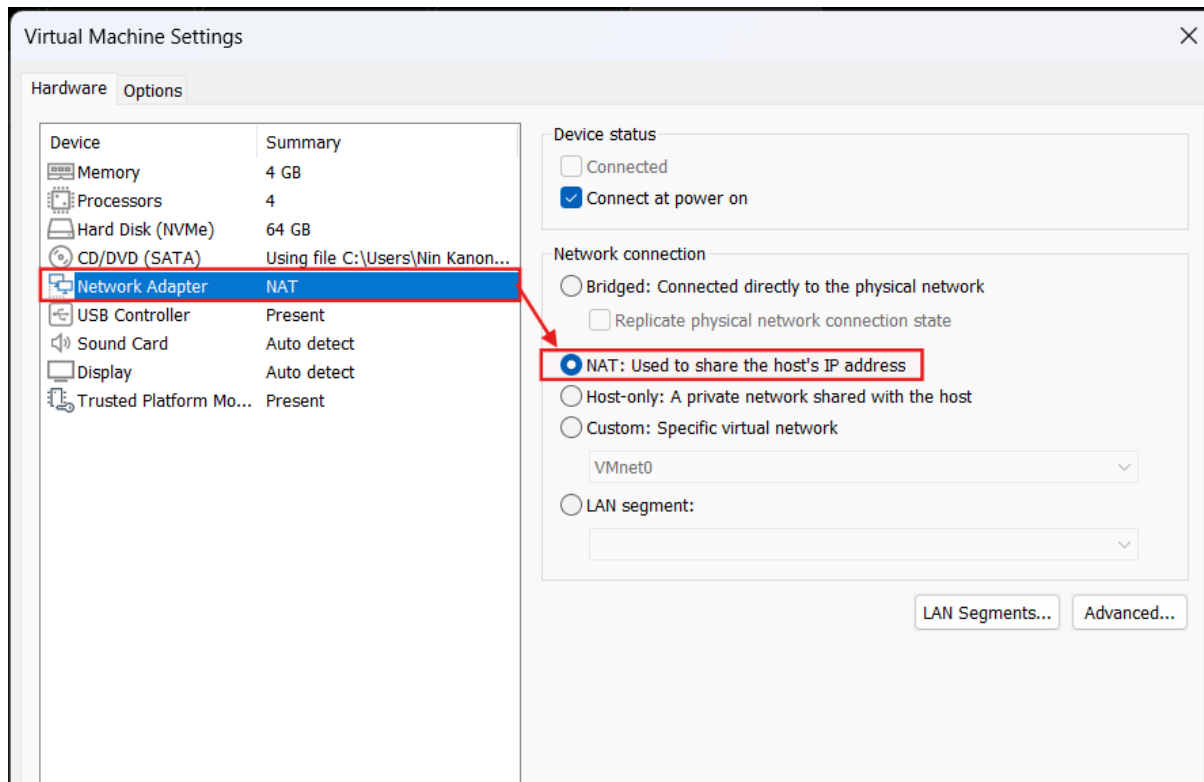

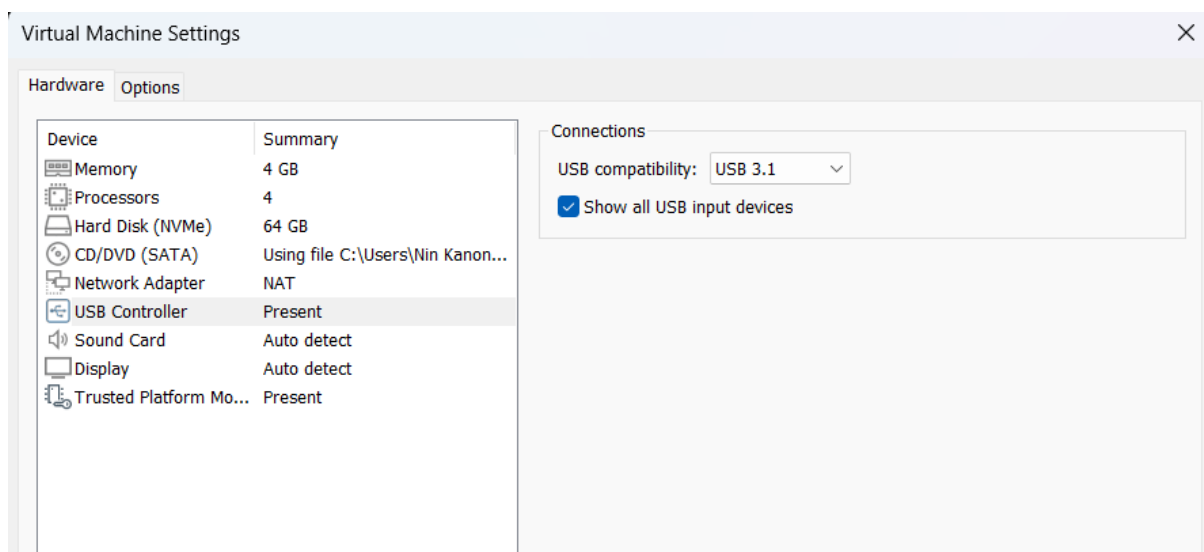

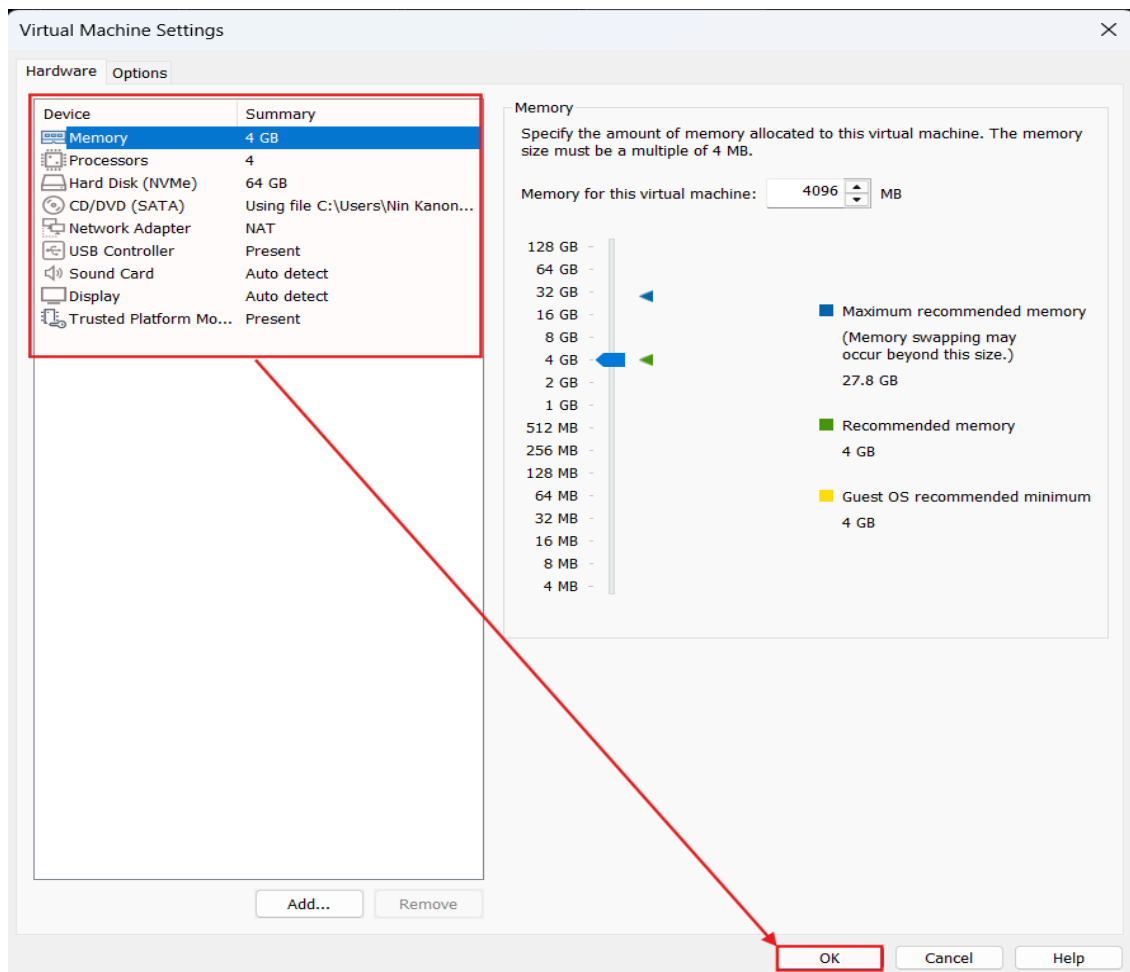

Now we see **windows 11 ISO** file:

In this we can choose others of three in this:

In this we can select or we don't:

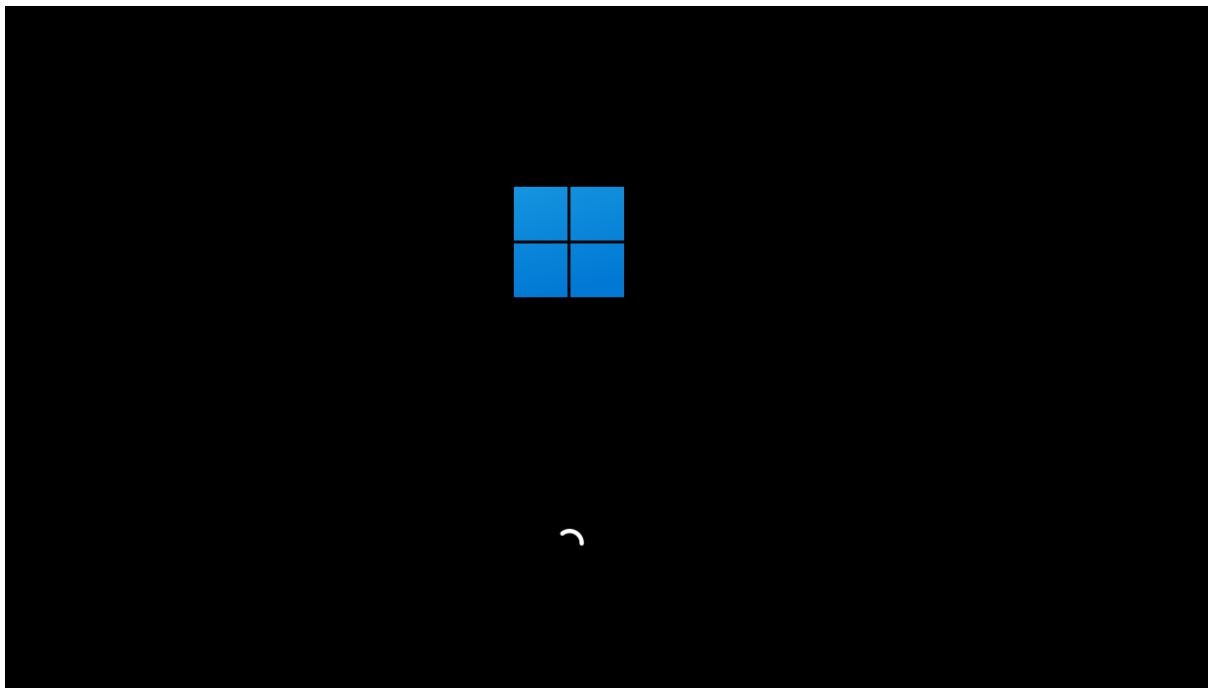

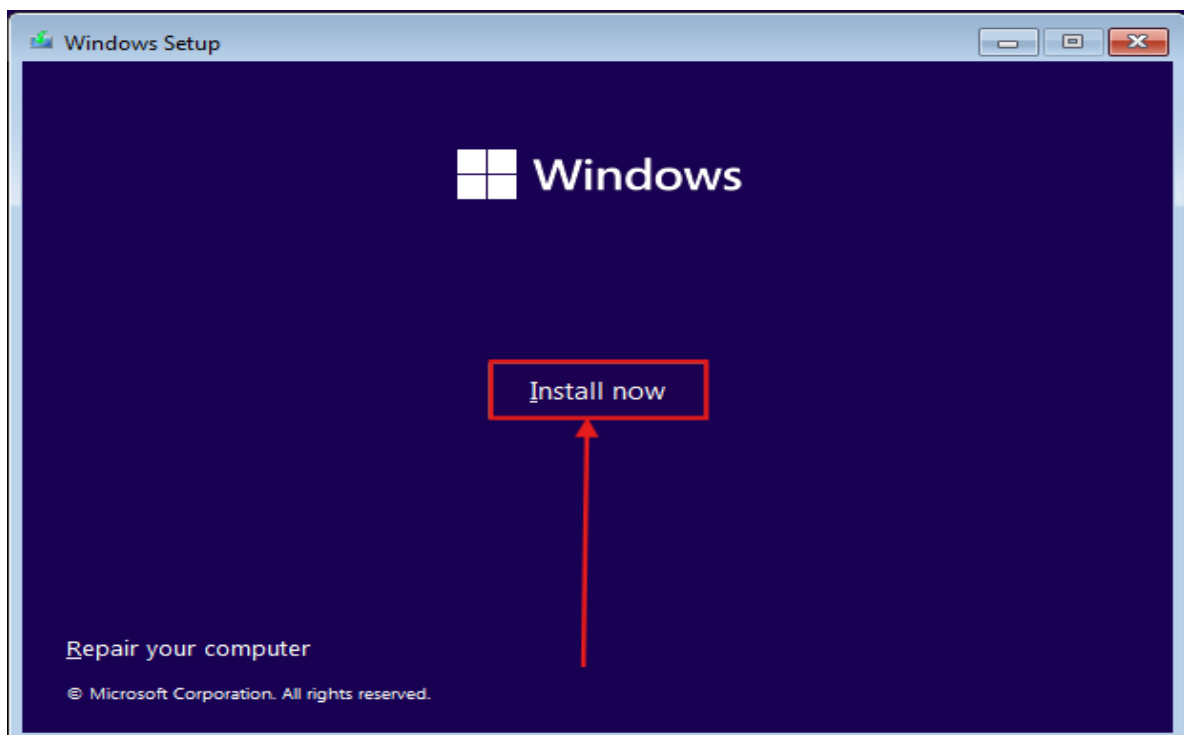

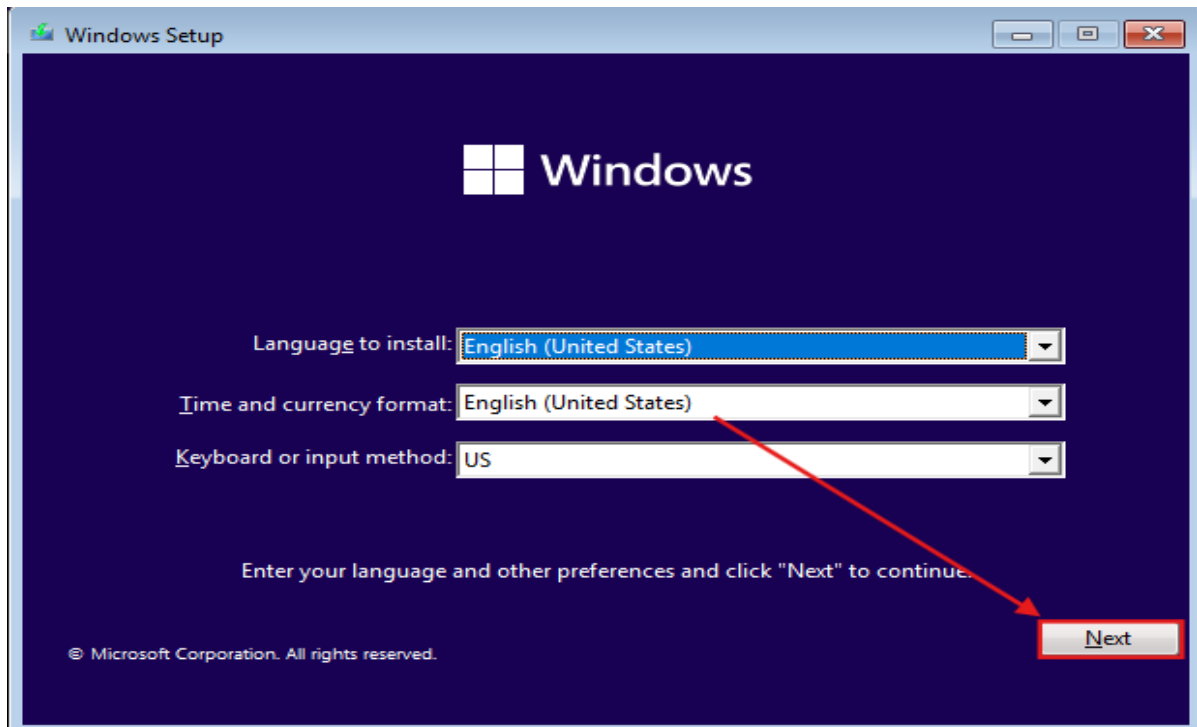

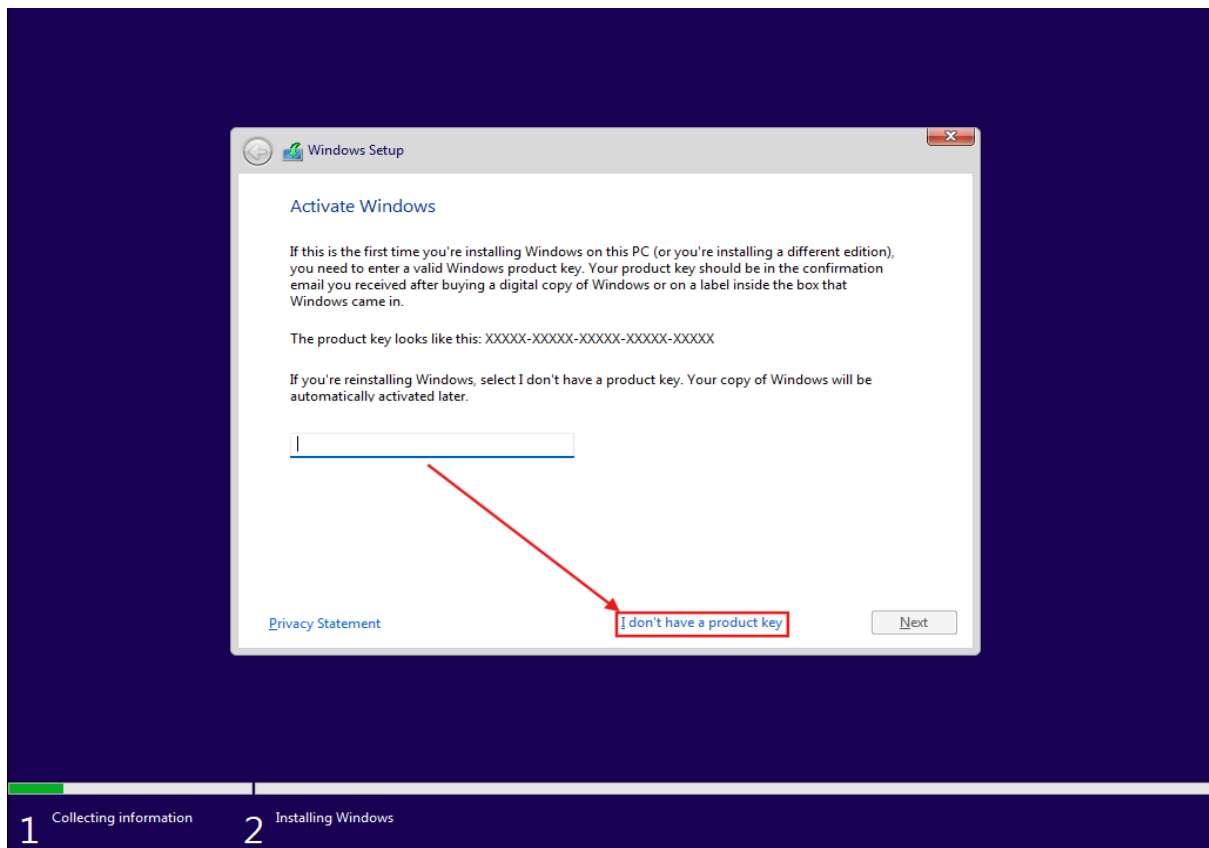

After run just press any key to continue, **Press fast any key to continue**

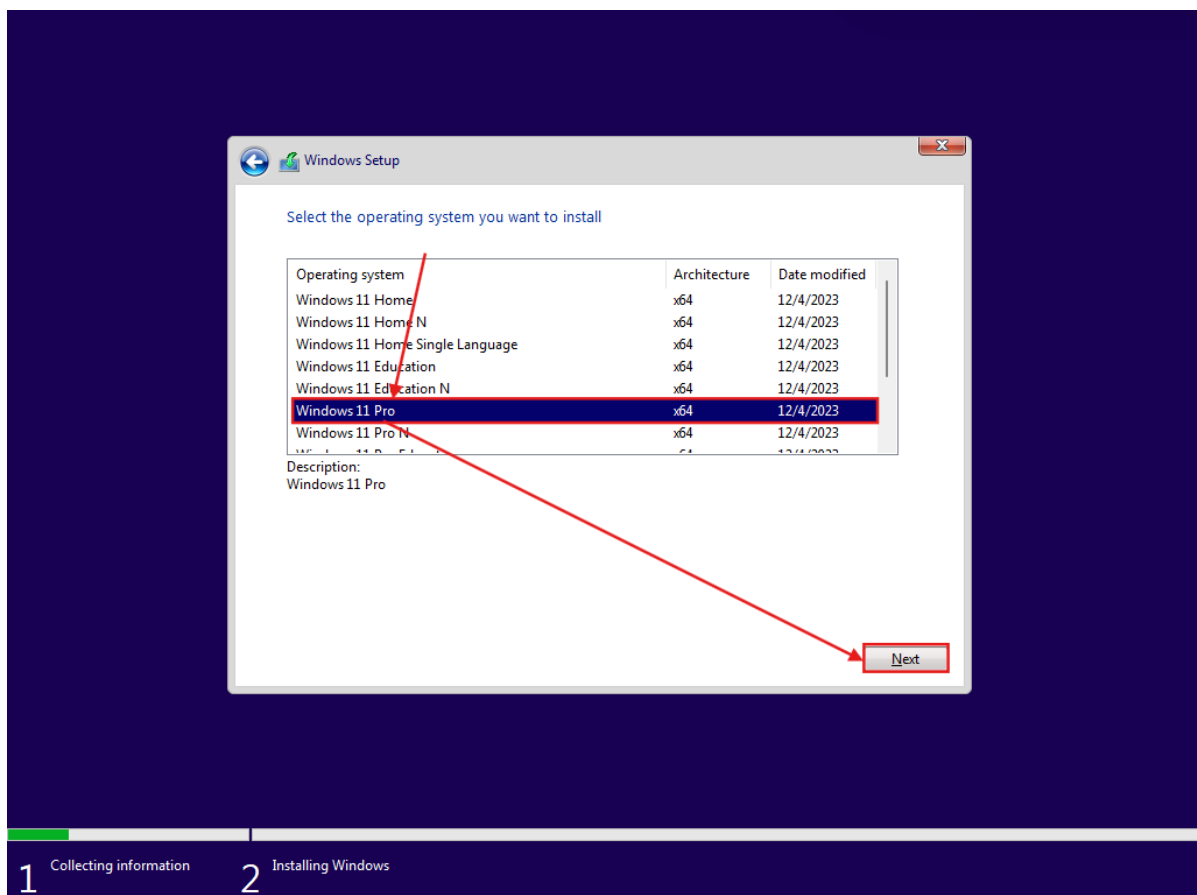

After we will see this:

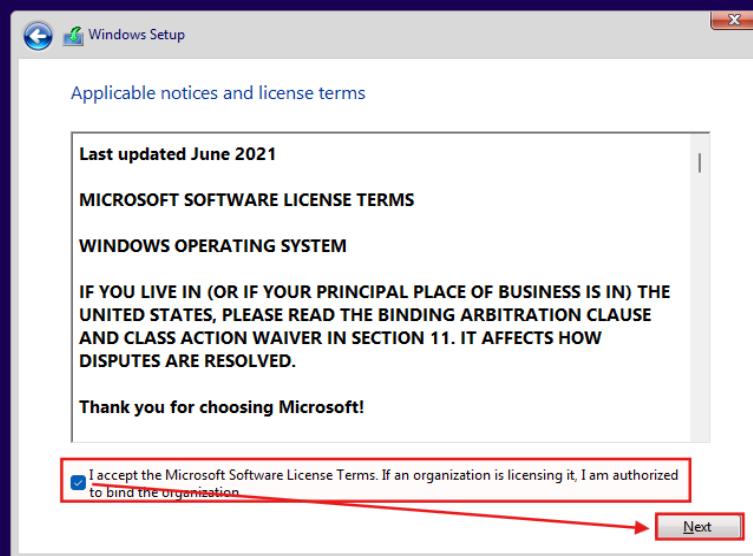

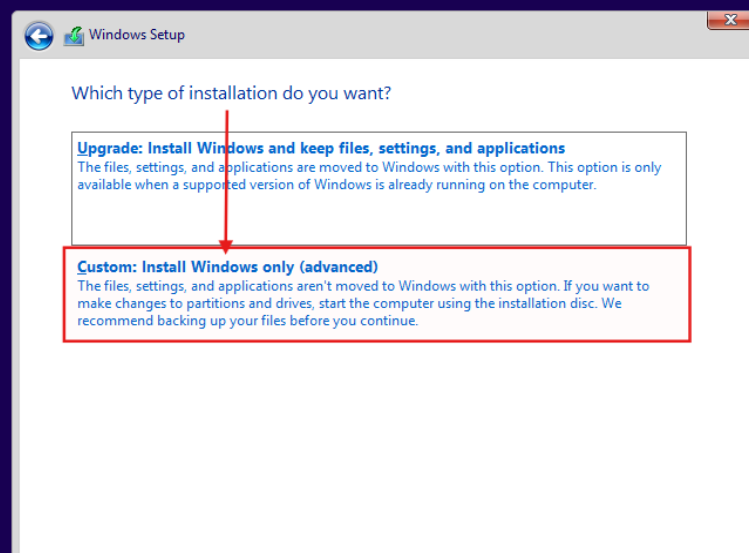

In this we can choose others Windows but in this I choose **Pro**:

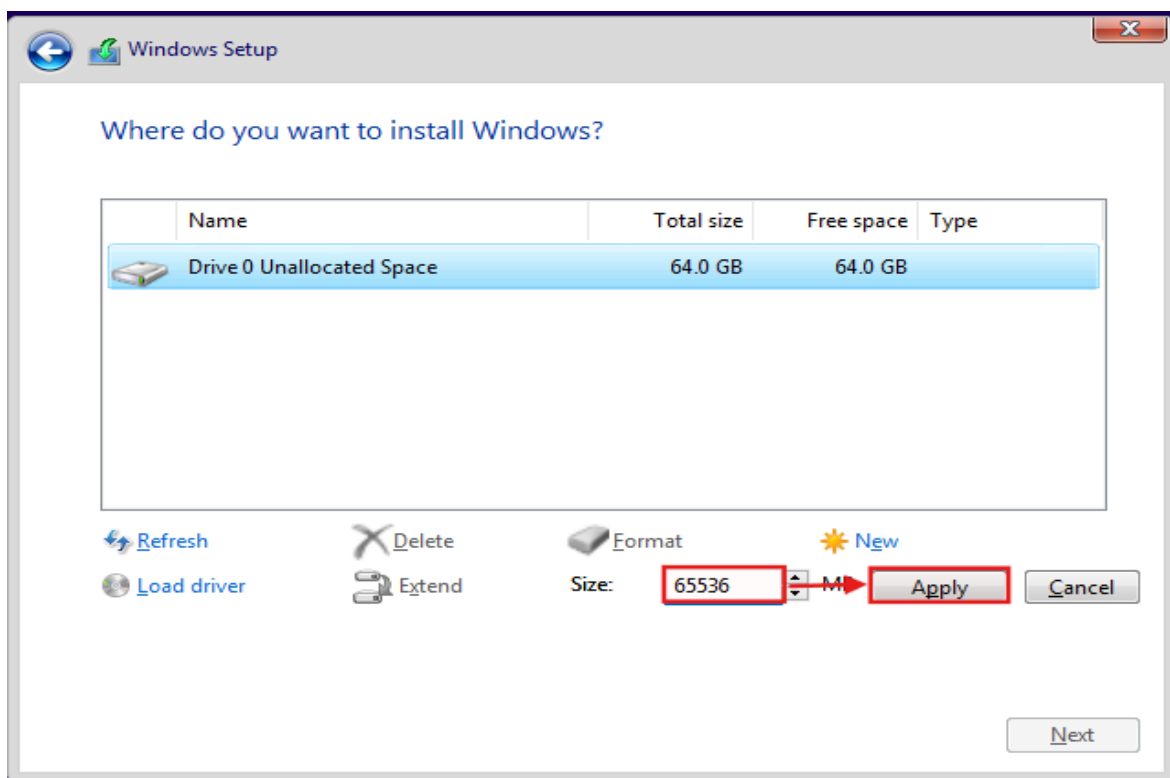

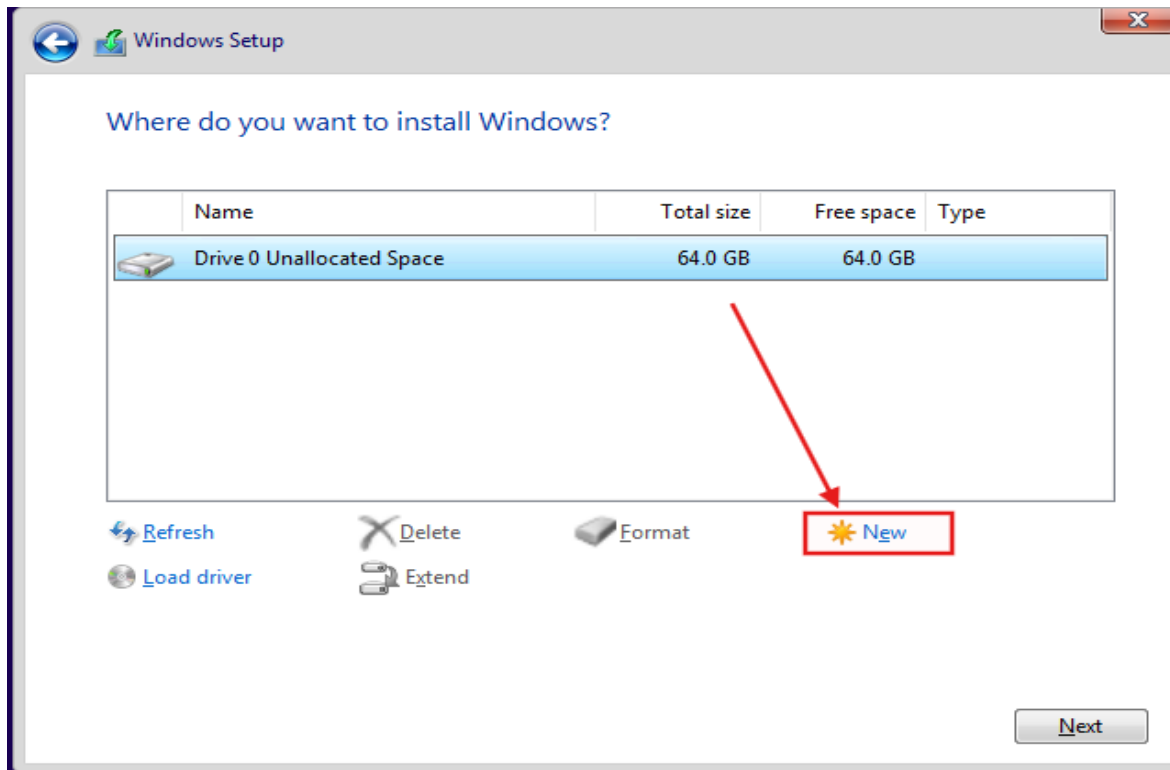

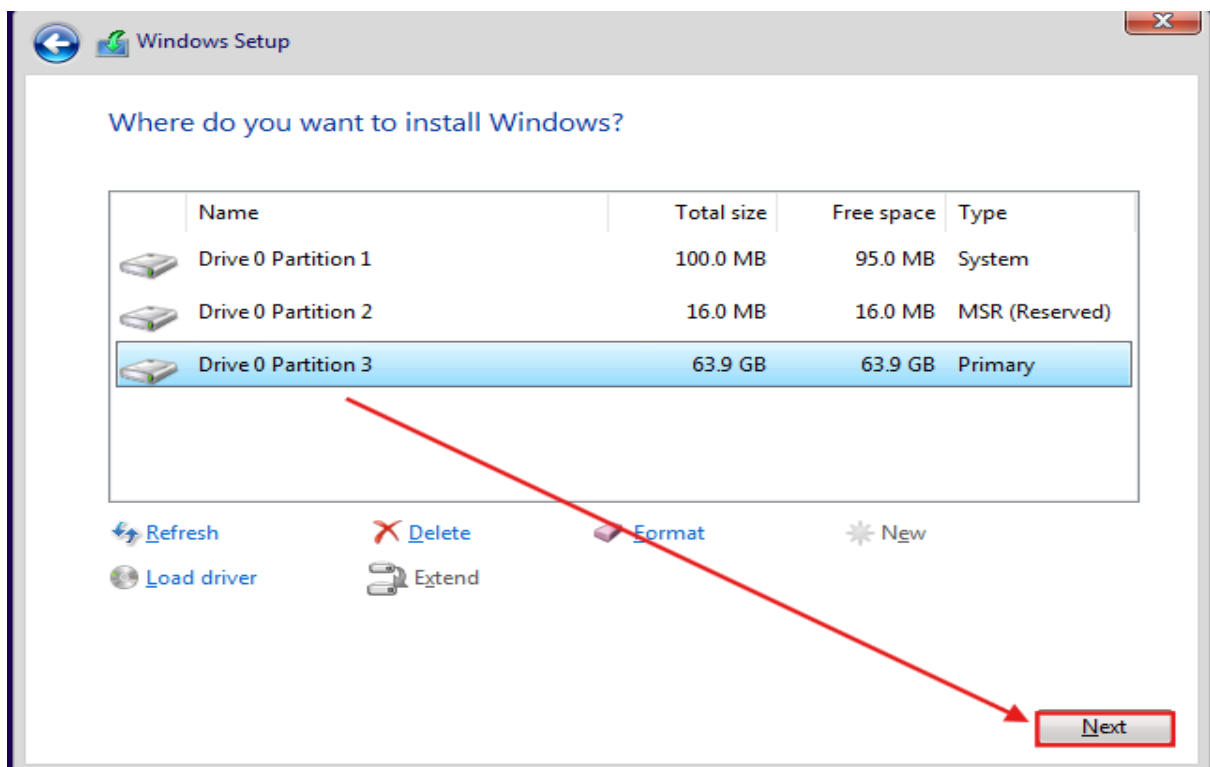

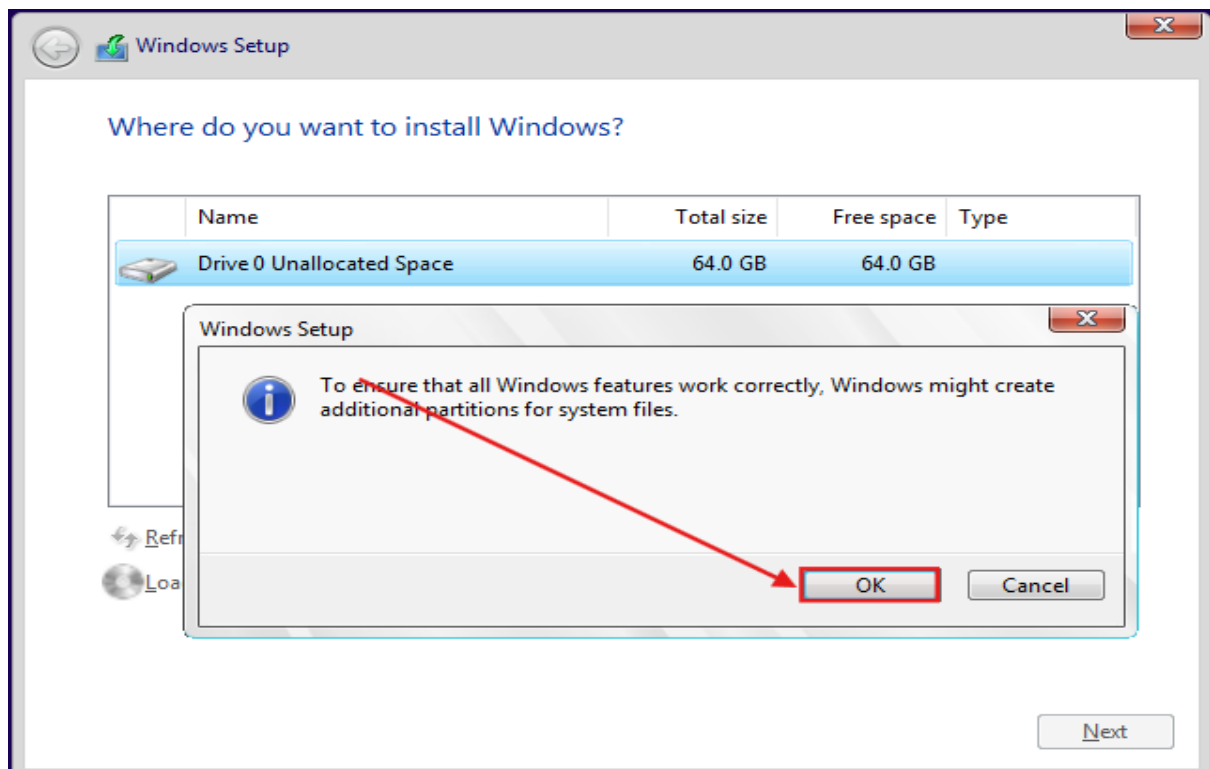

1 Collecting information 2 Installing Windows

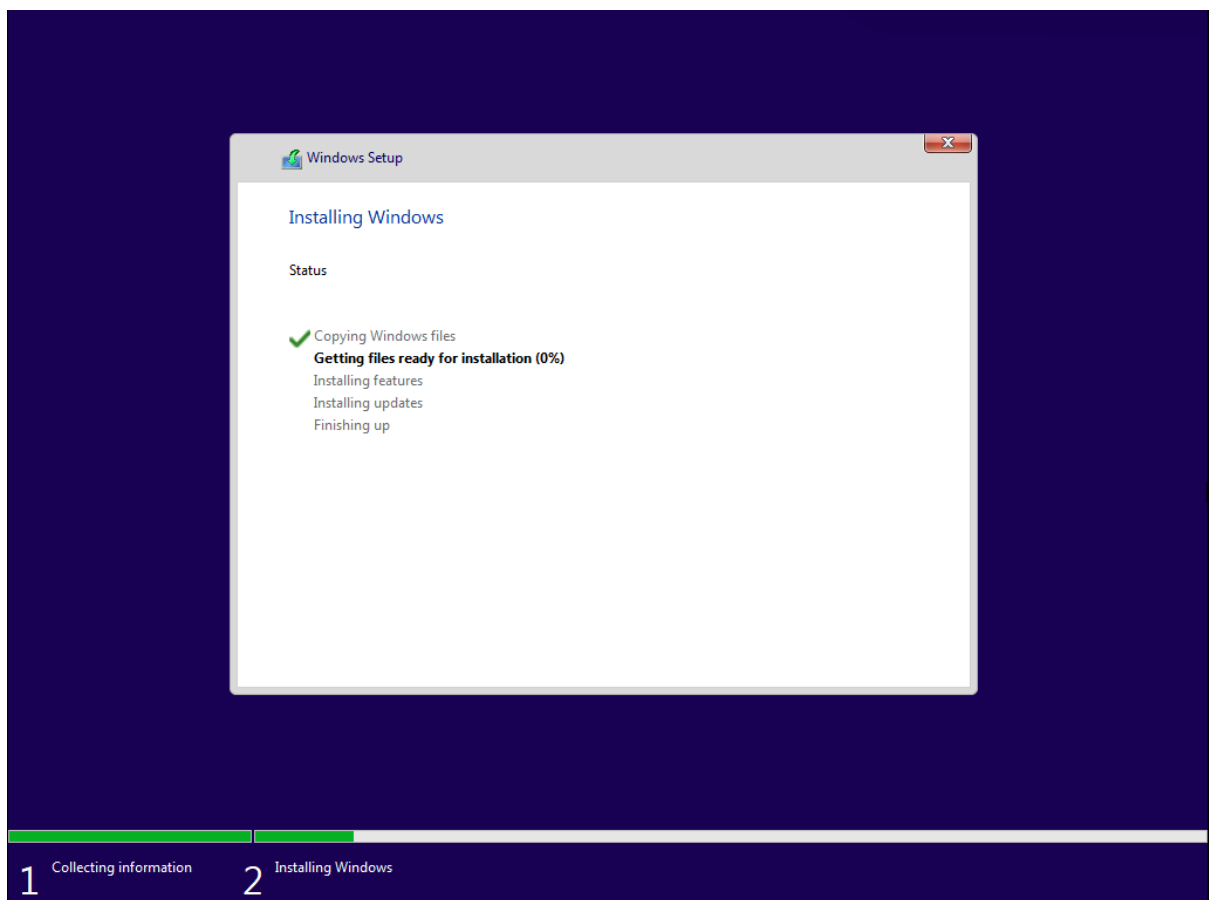

1 Collecting information 2 Installing Windows

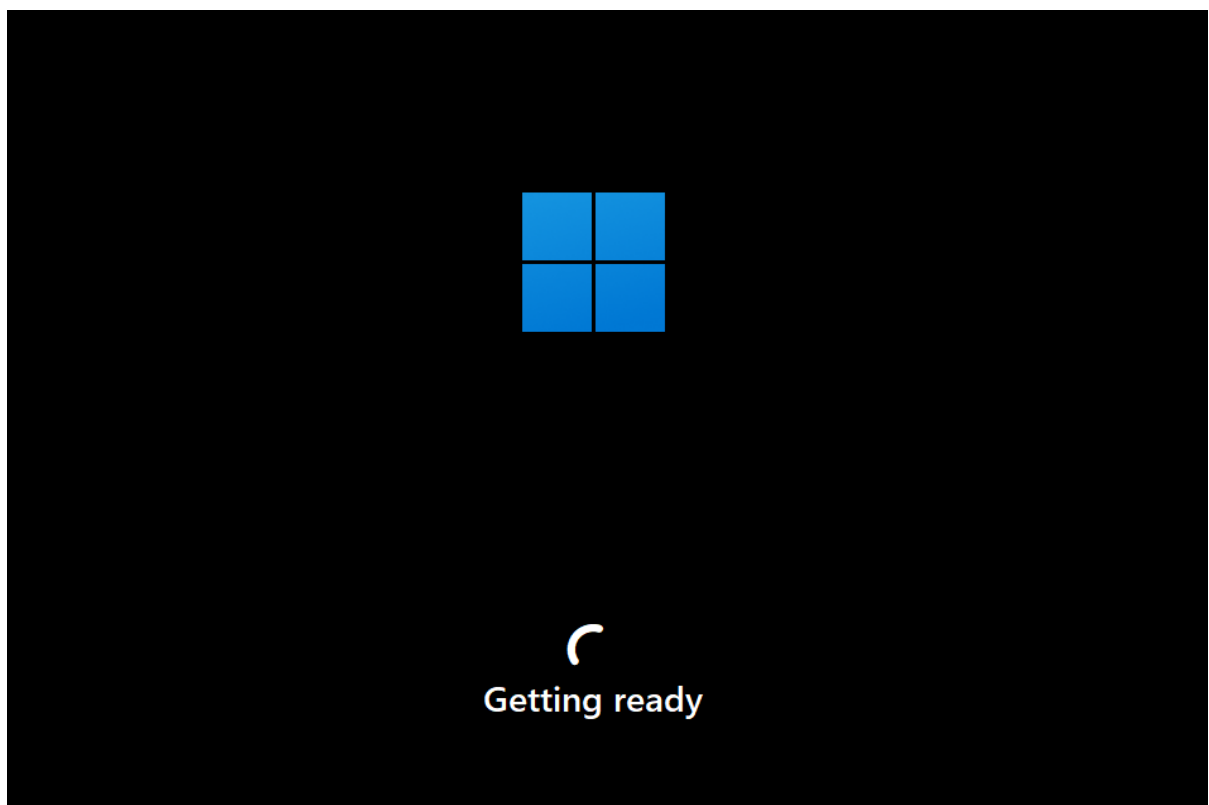

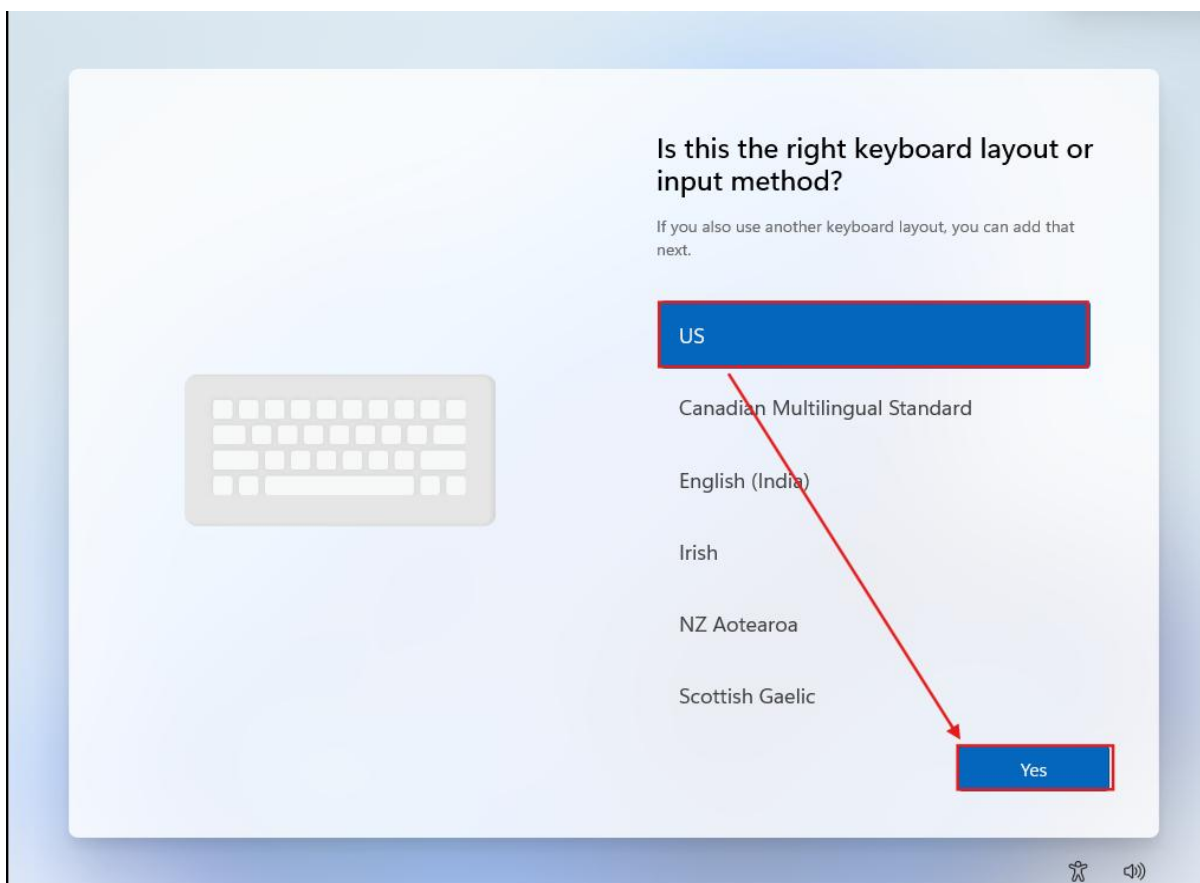

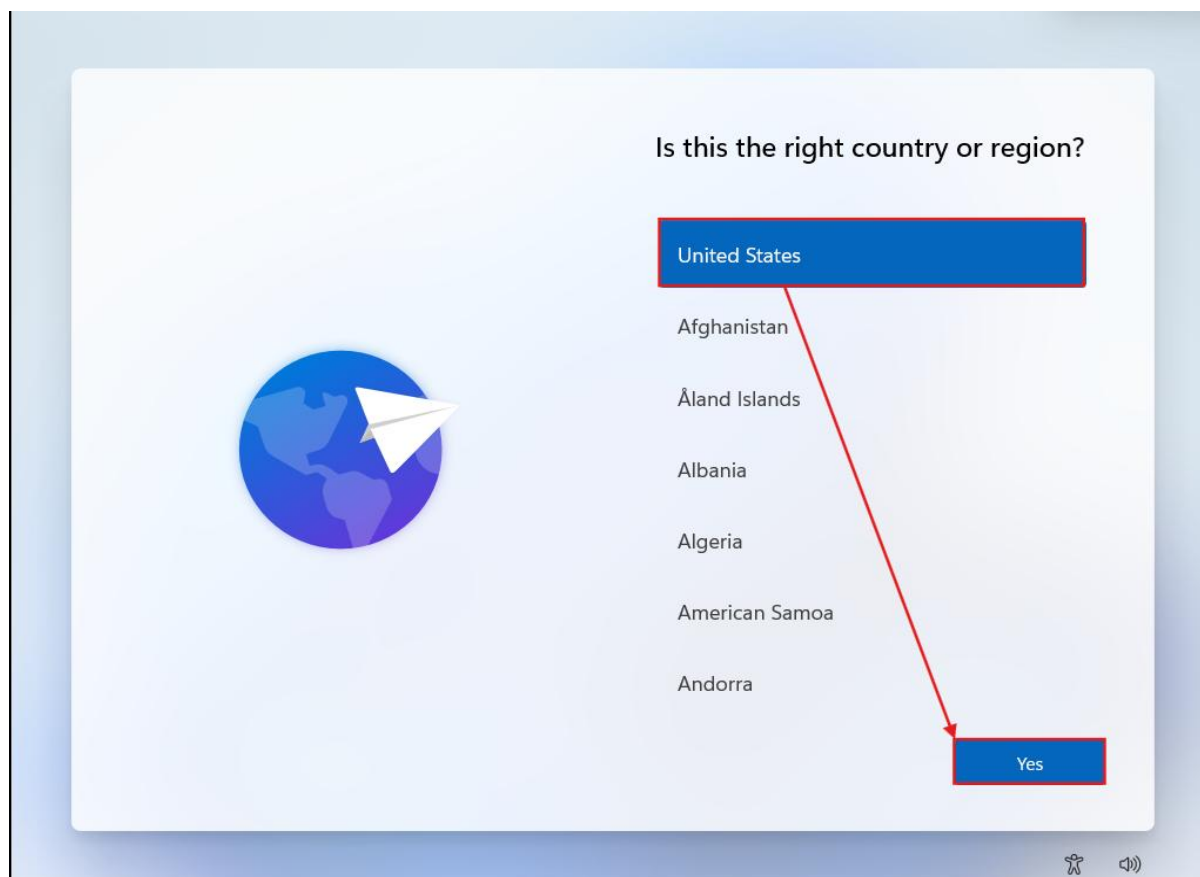

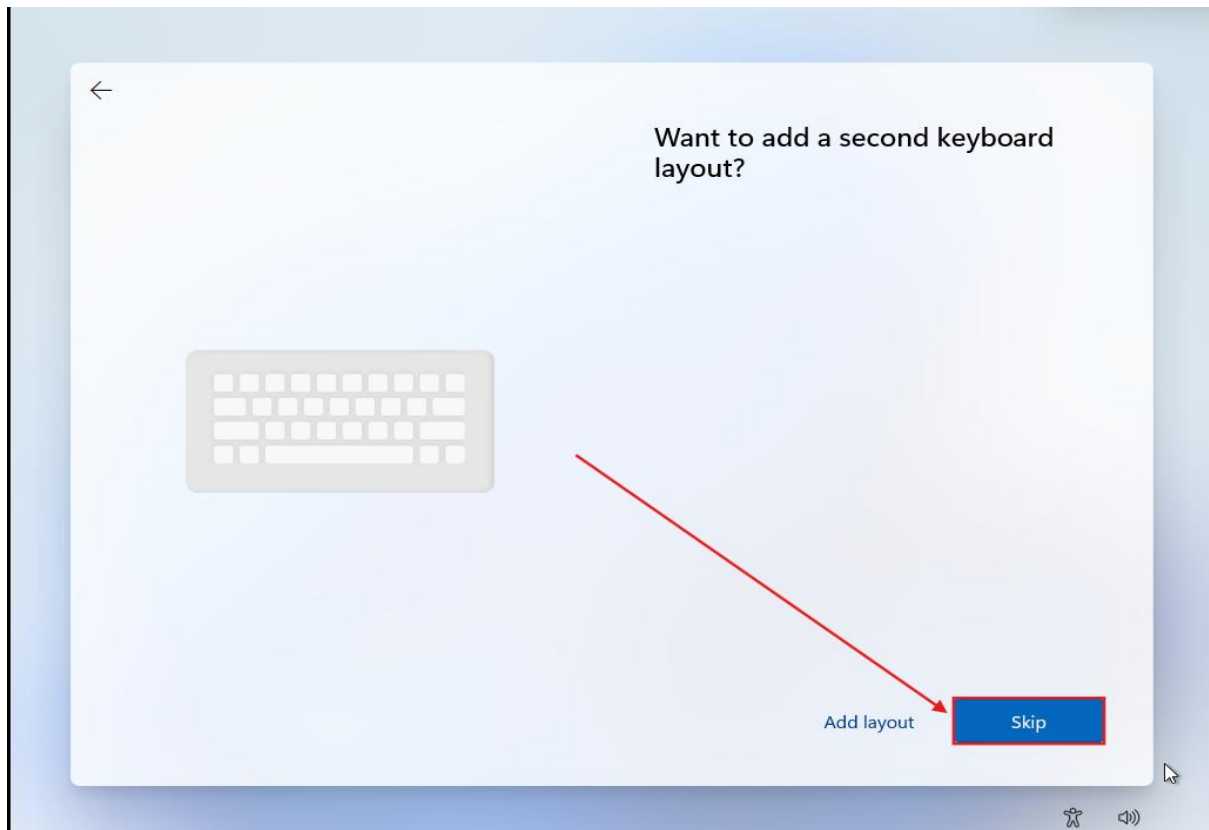

Now it will start install, and wait a few minute:

Now it was finished, and then wait it will go into windows:

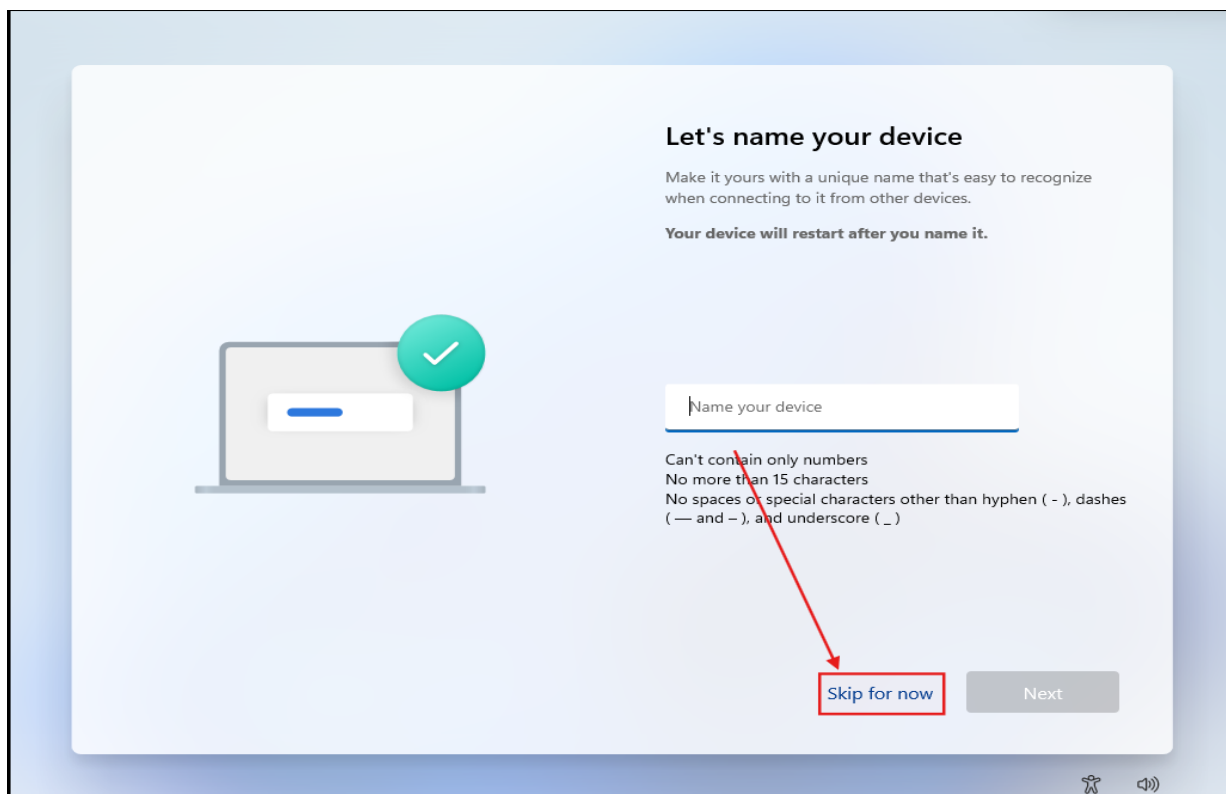

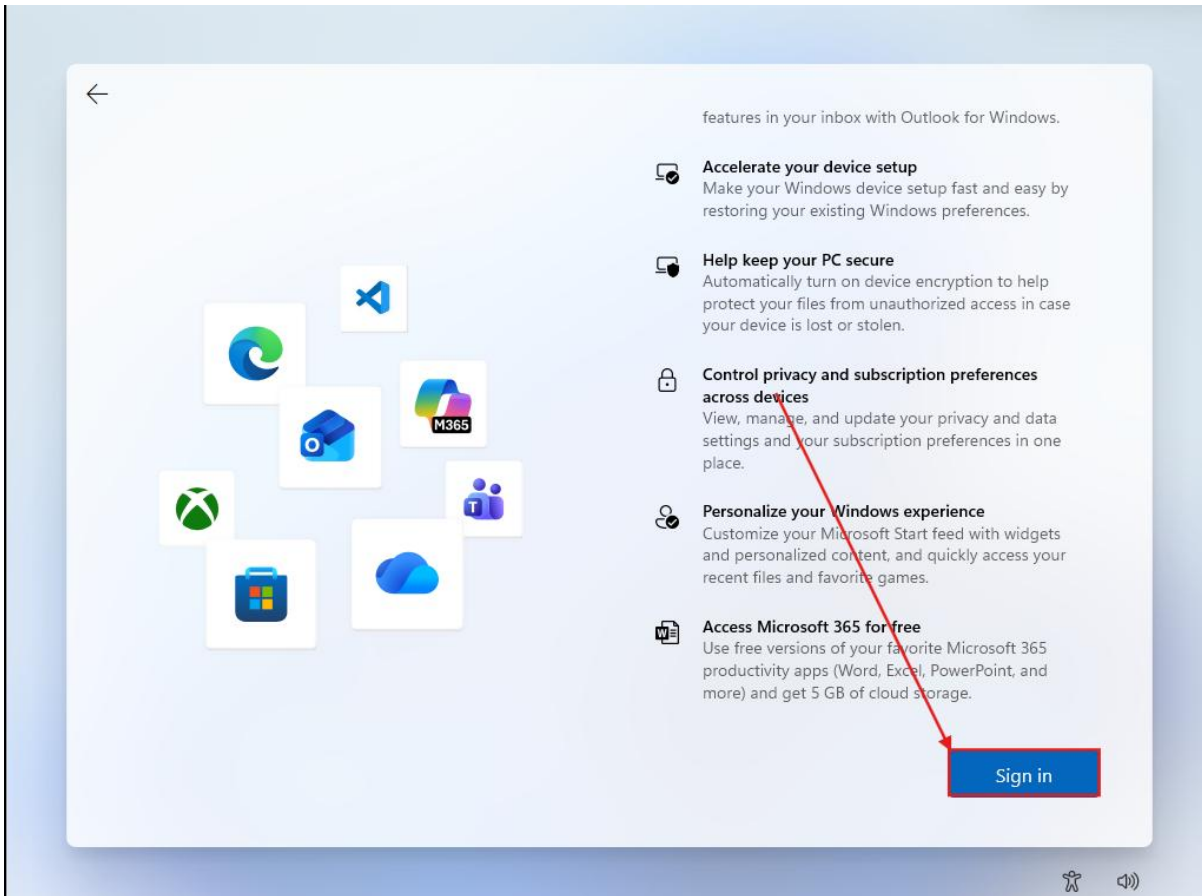

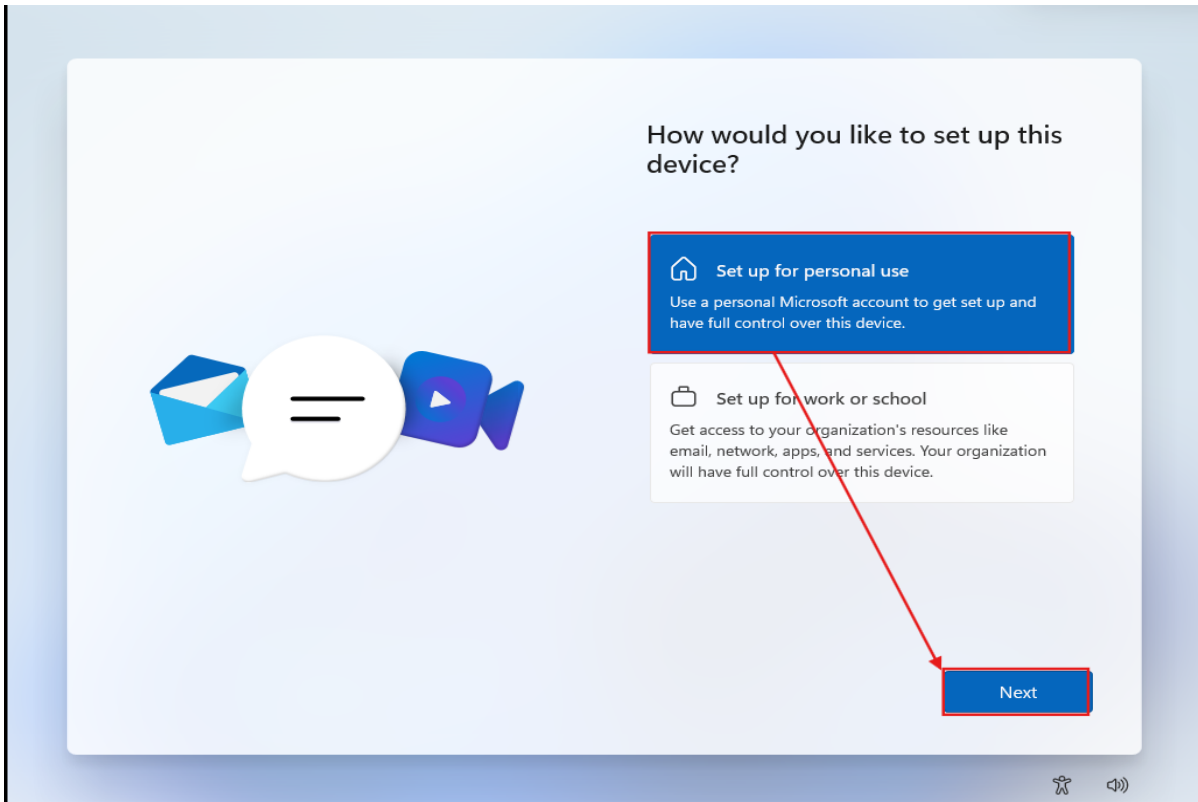

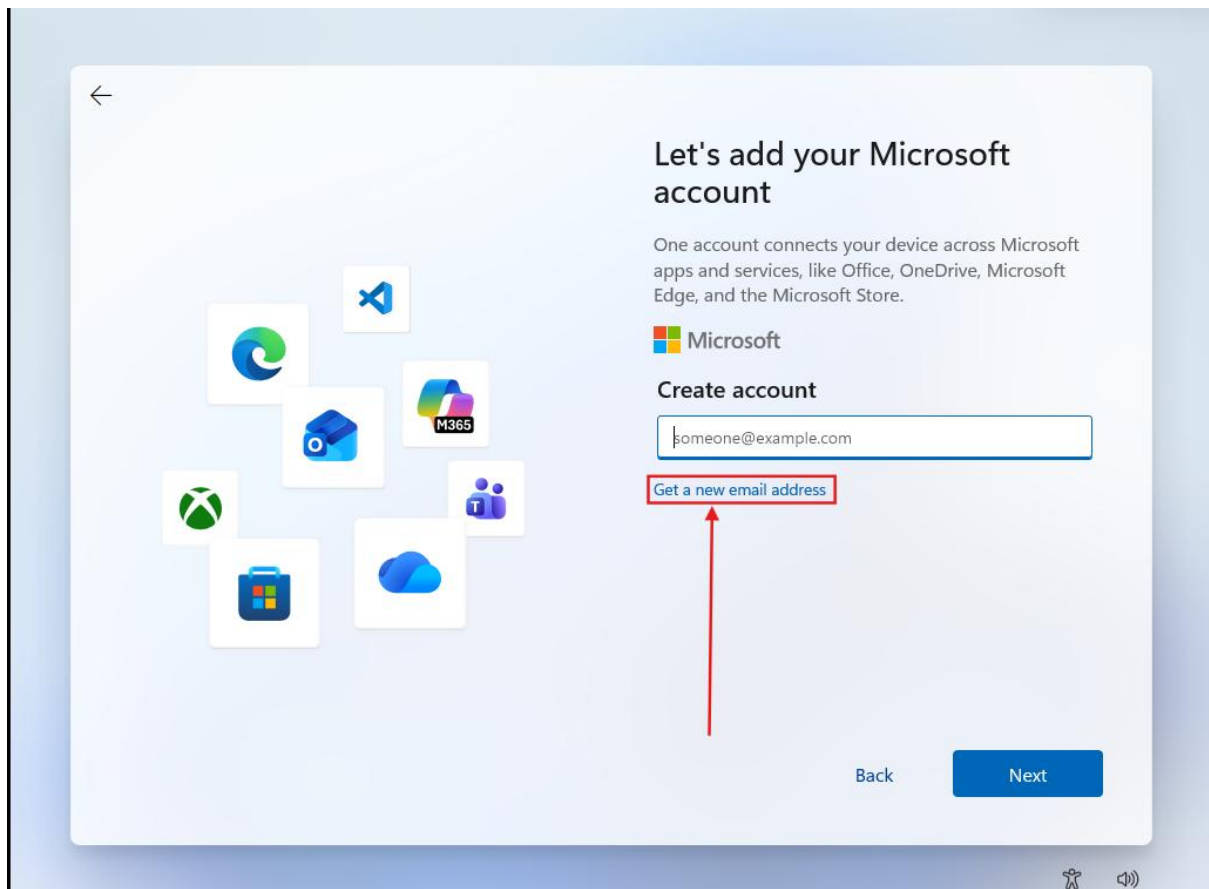

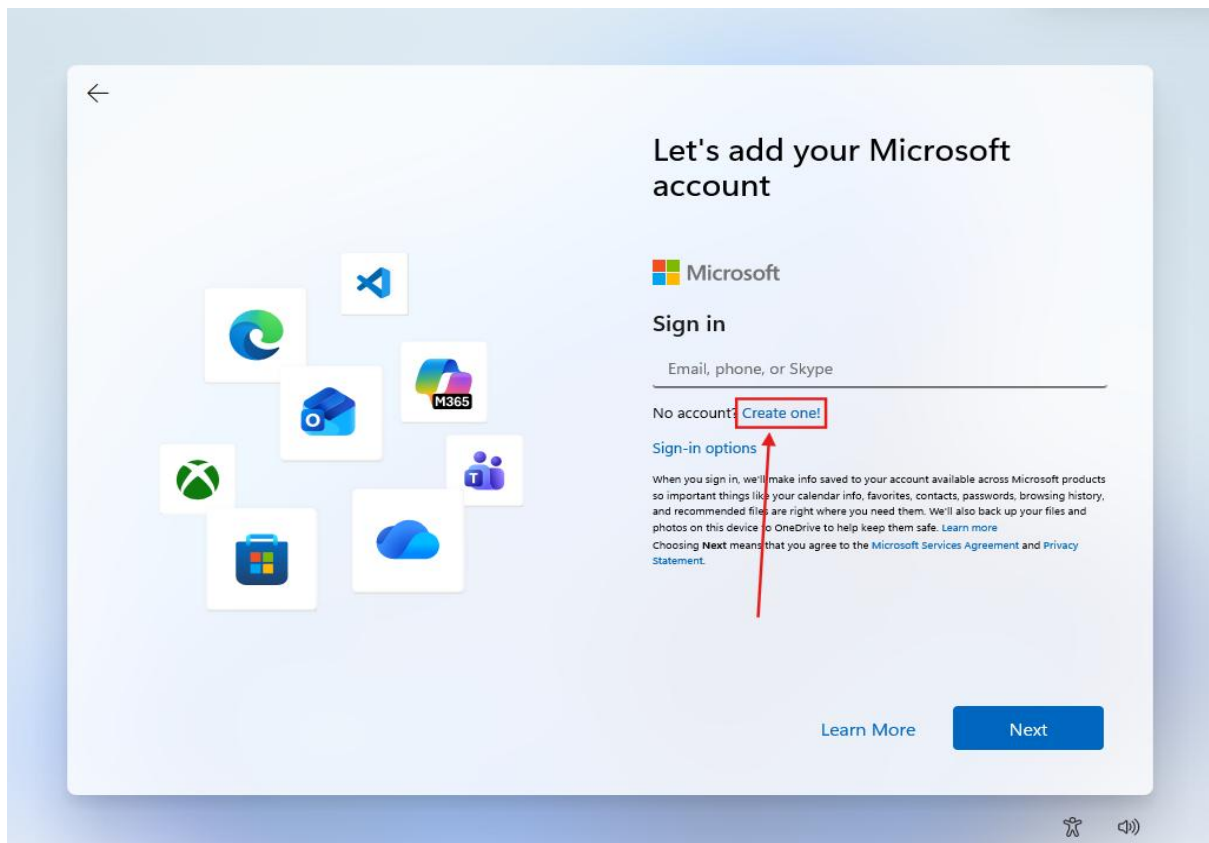

After in this wait a few it until it show windows.

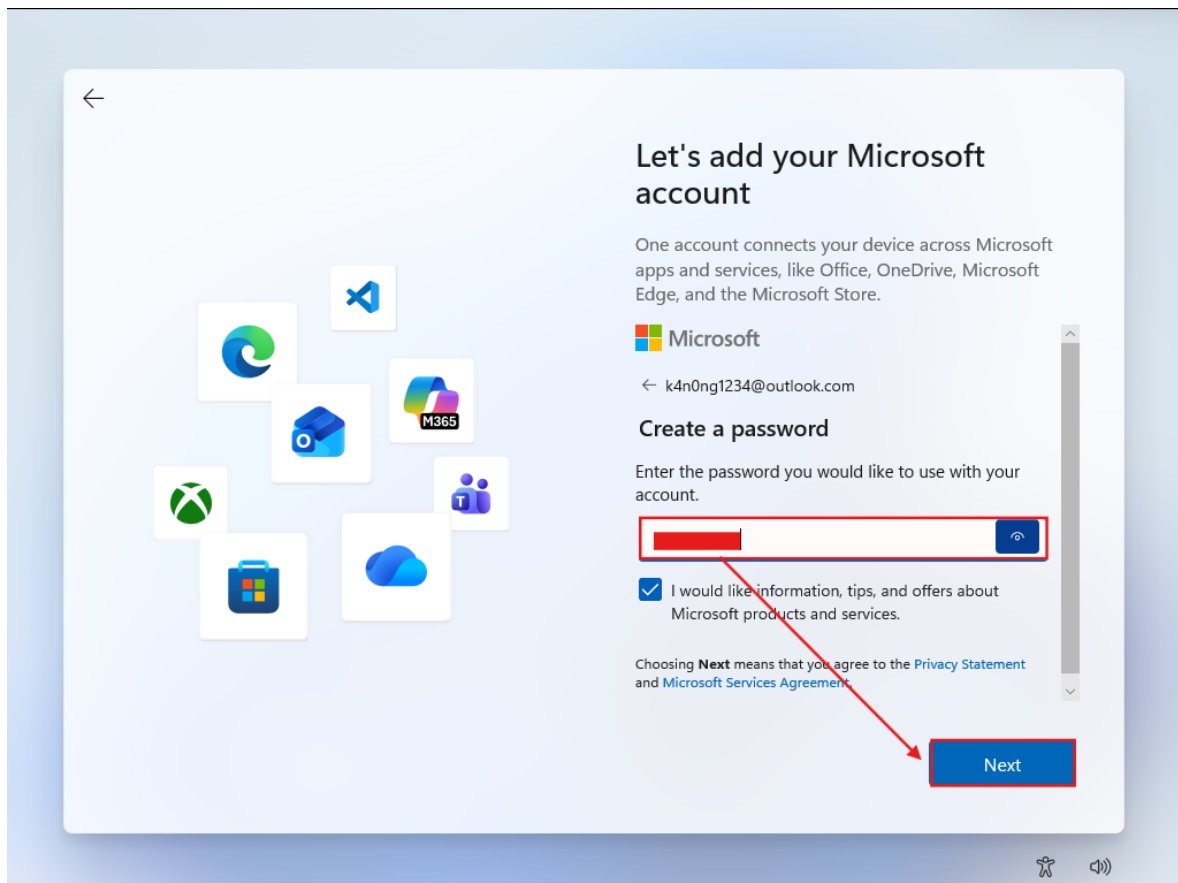

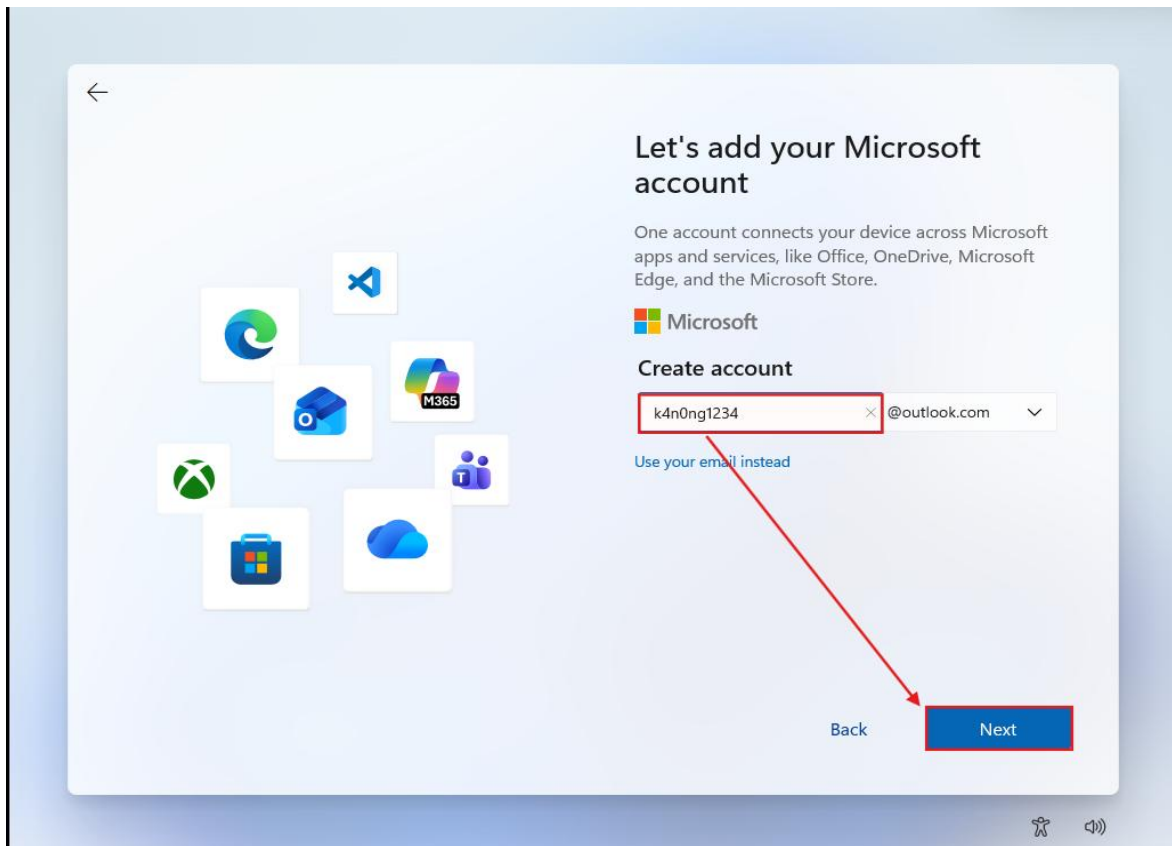

In this we can input name device, but I don't want to input it:

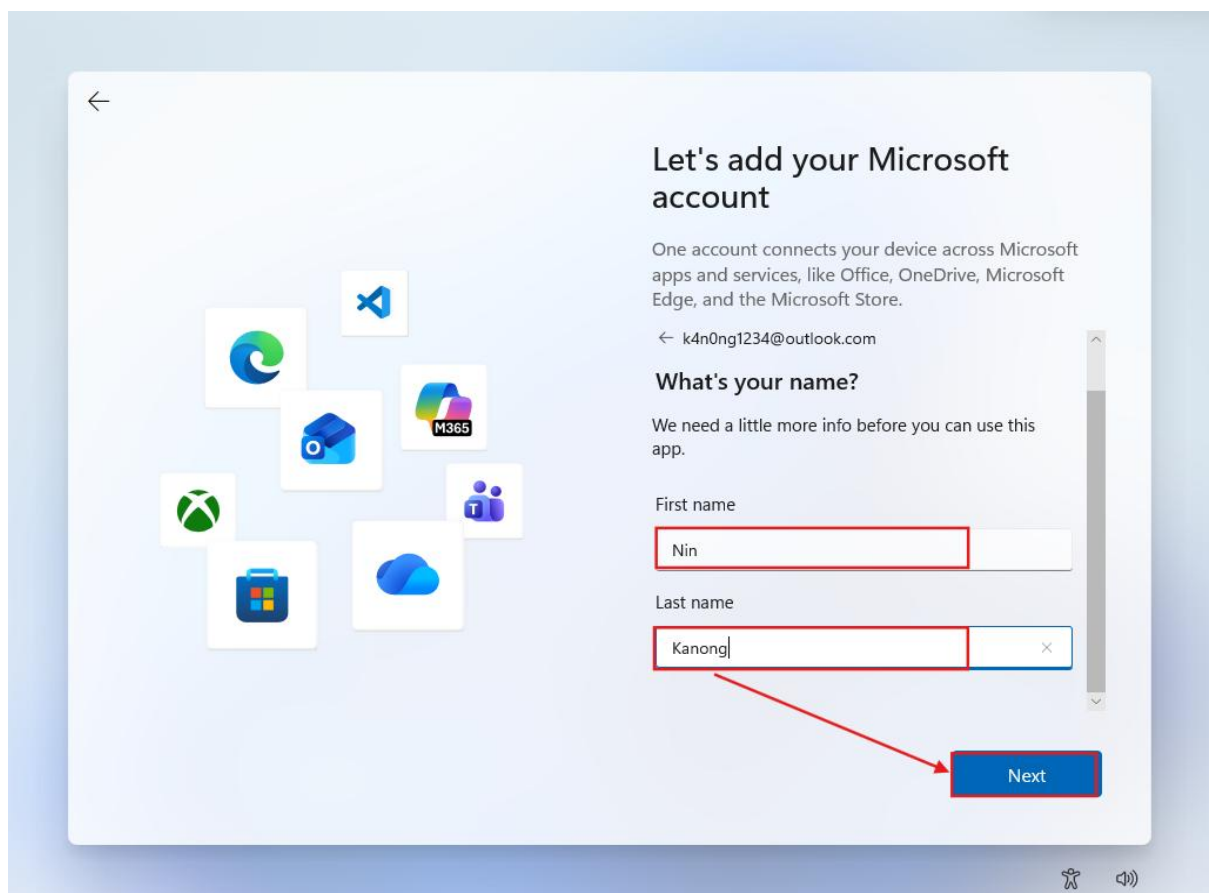

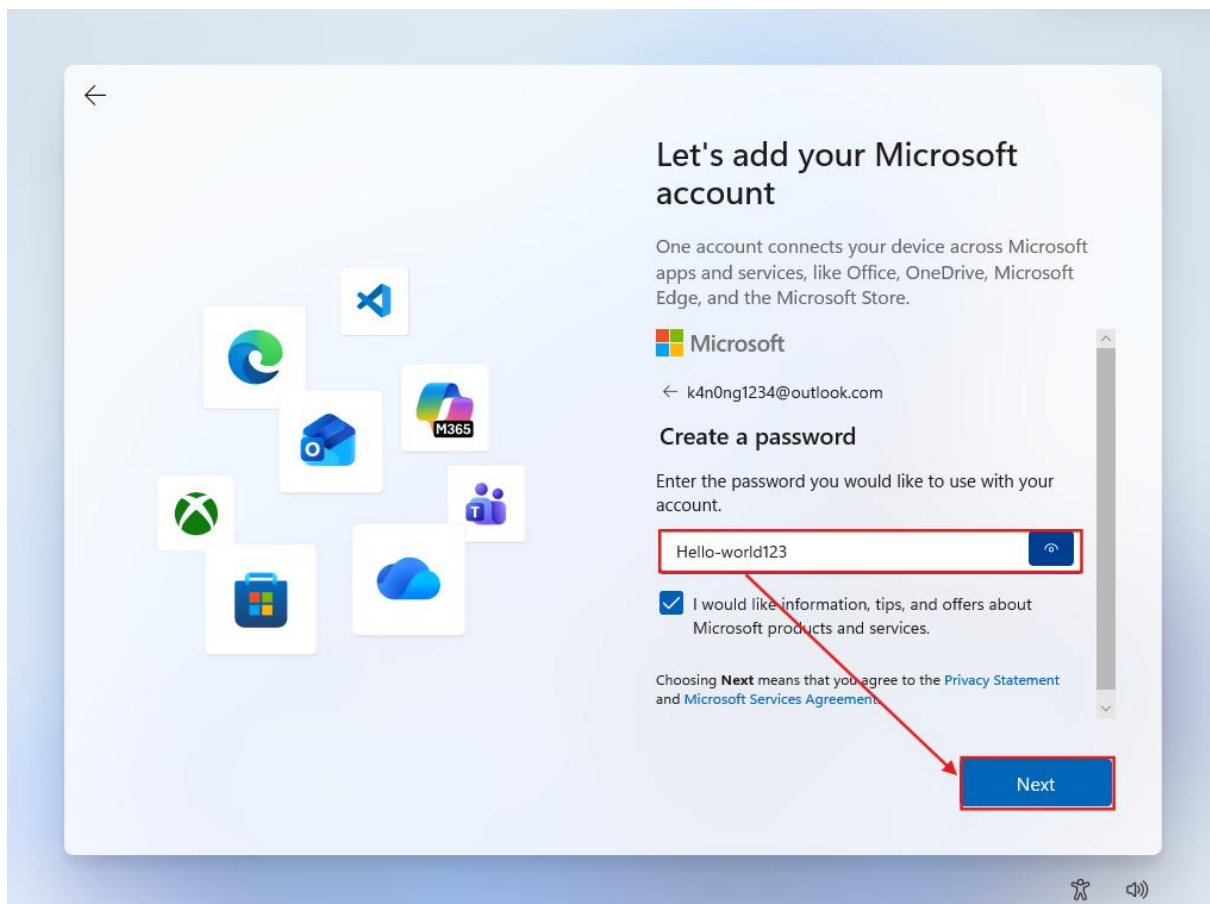

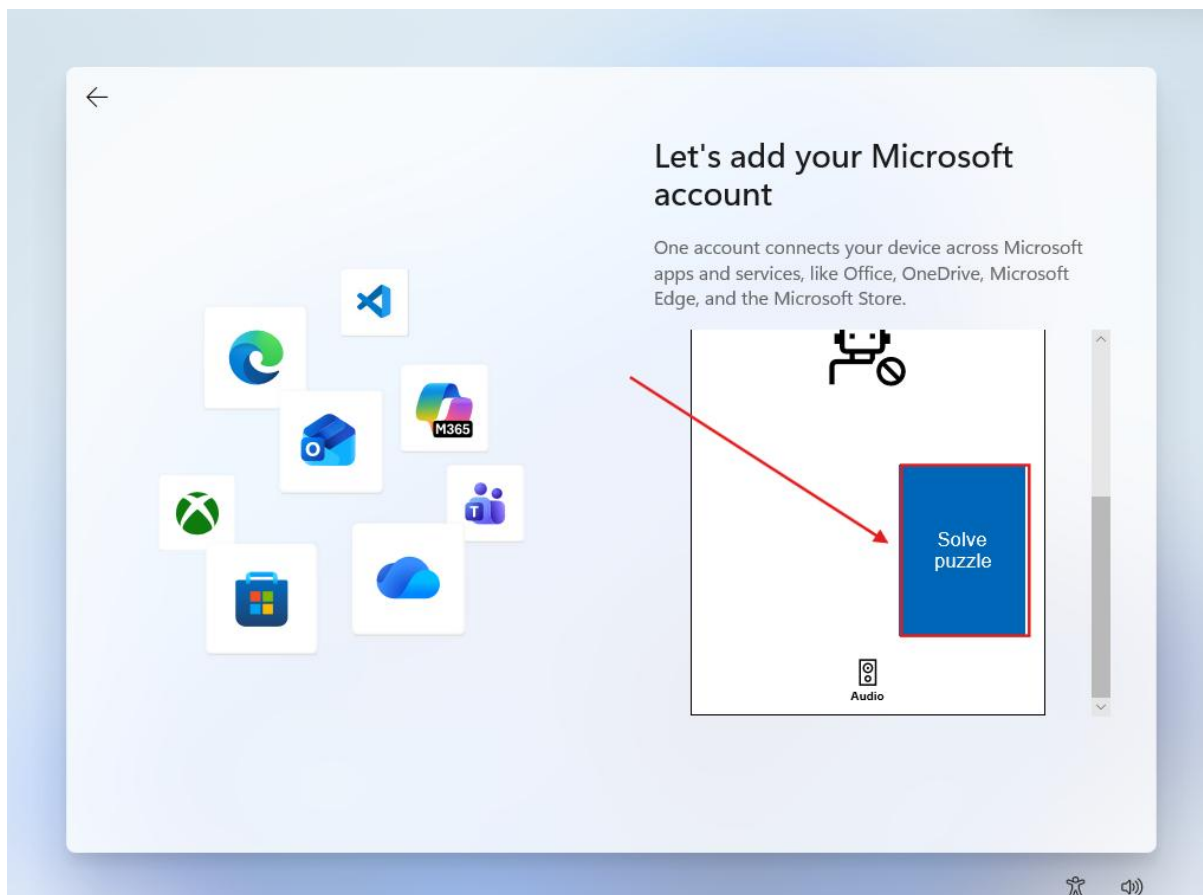

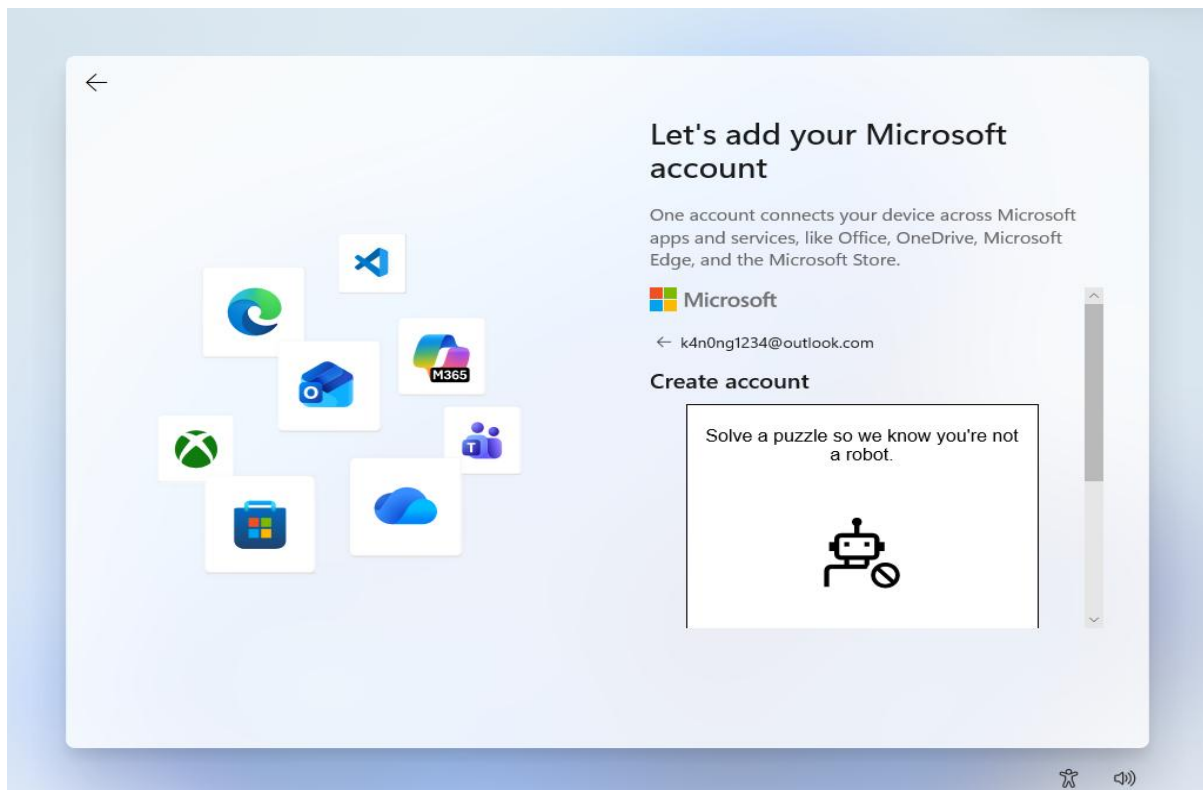

In this if we have one account we can Sign In, but I want to create new:

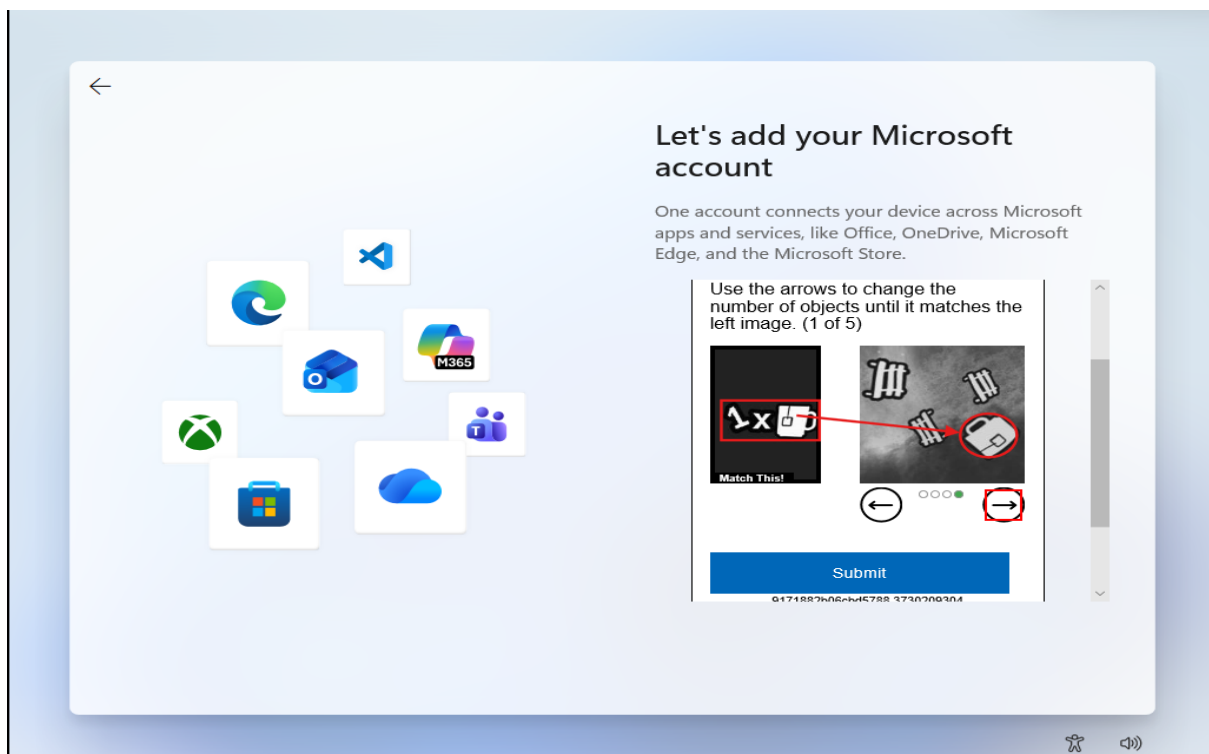

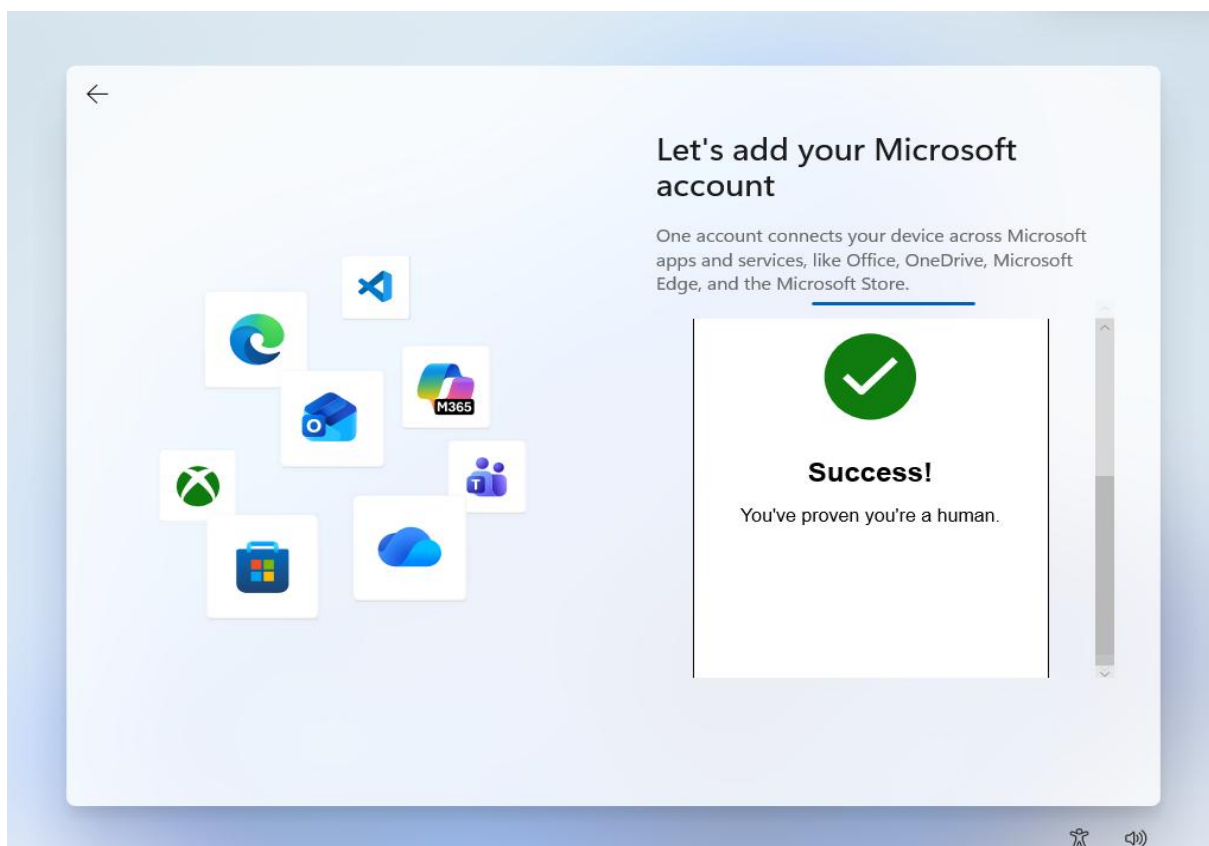

After scroll down:

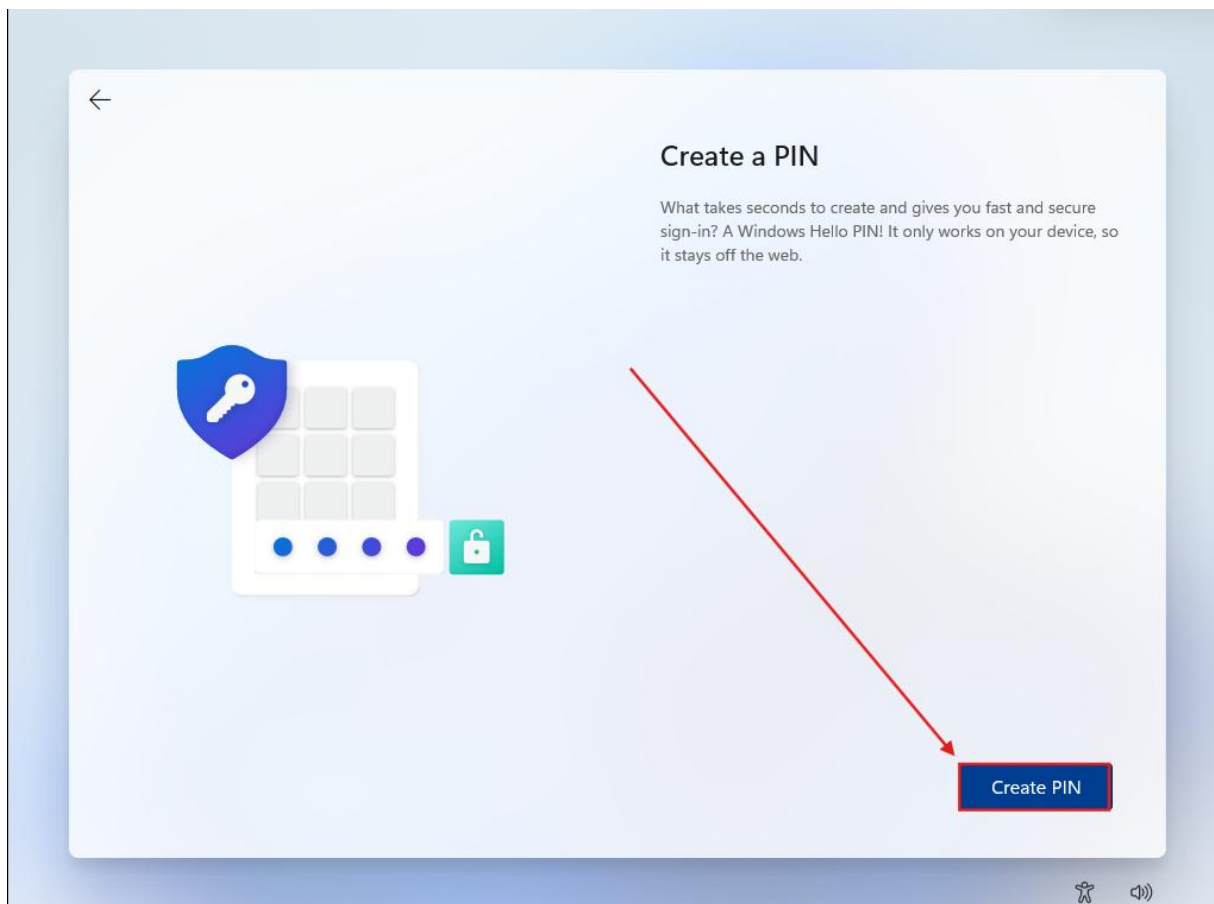

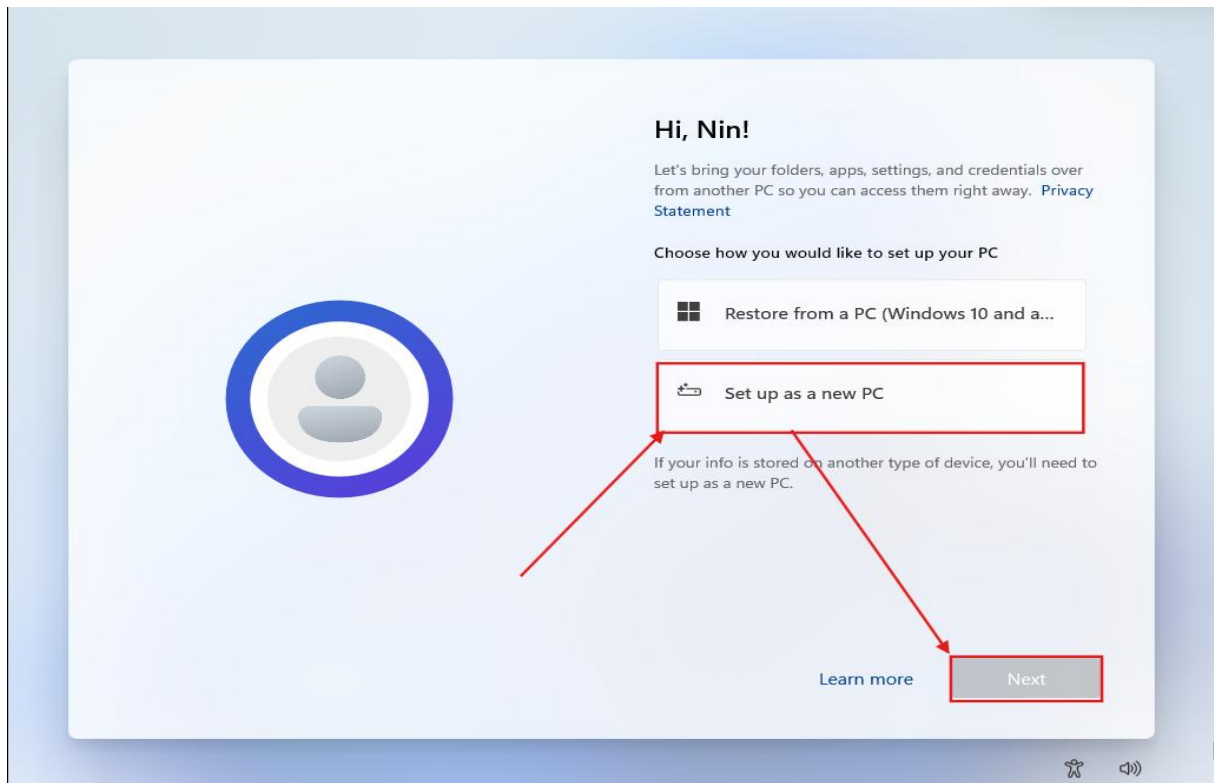

After solve all these:

Now I was solve all of it:

Set up a PIN

A Windows Hello PIN is a fast, secure way to sign in to your device, apps, and services.

After wait it until it show download:

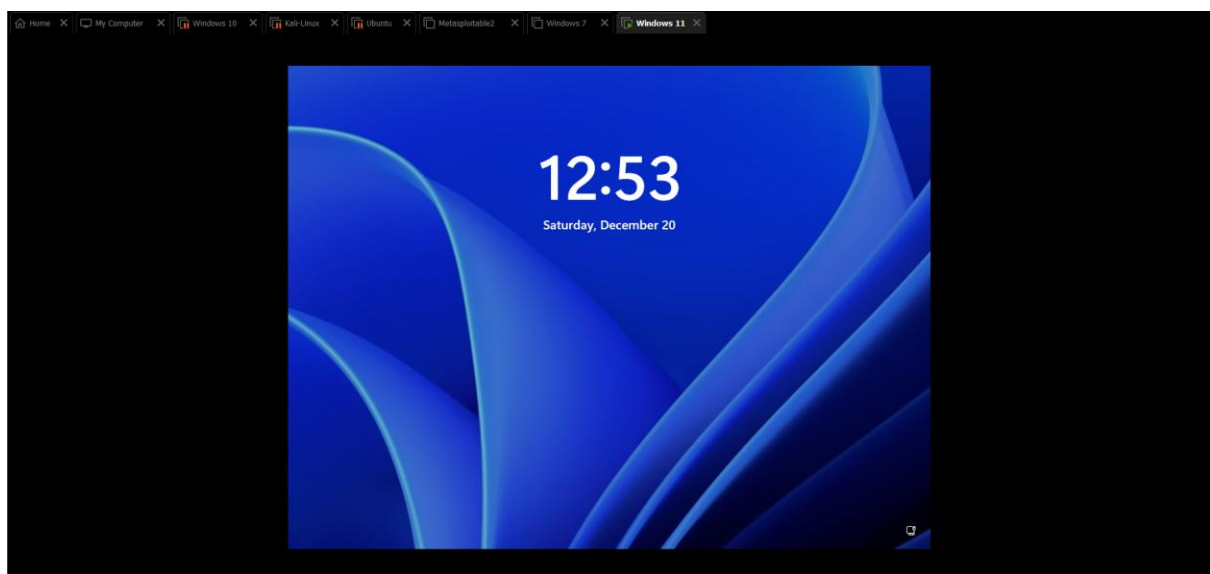

Wait it until it full of these three:

After wait until it finished download it will show this to update, and wait a few minute to finished update:

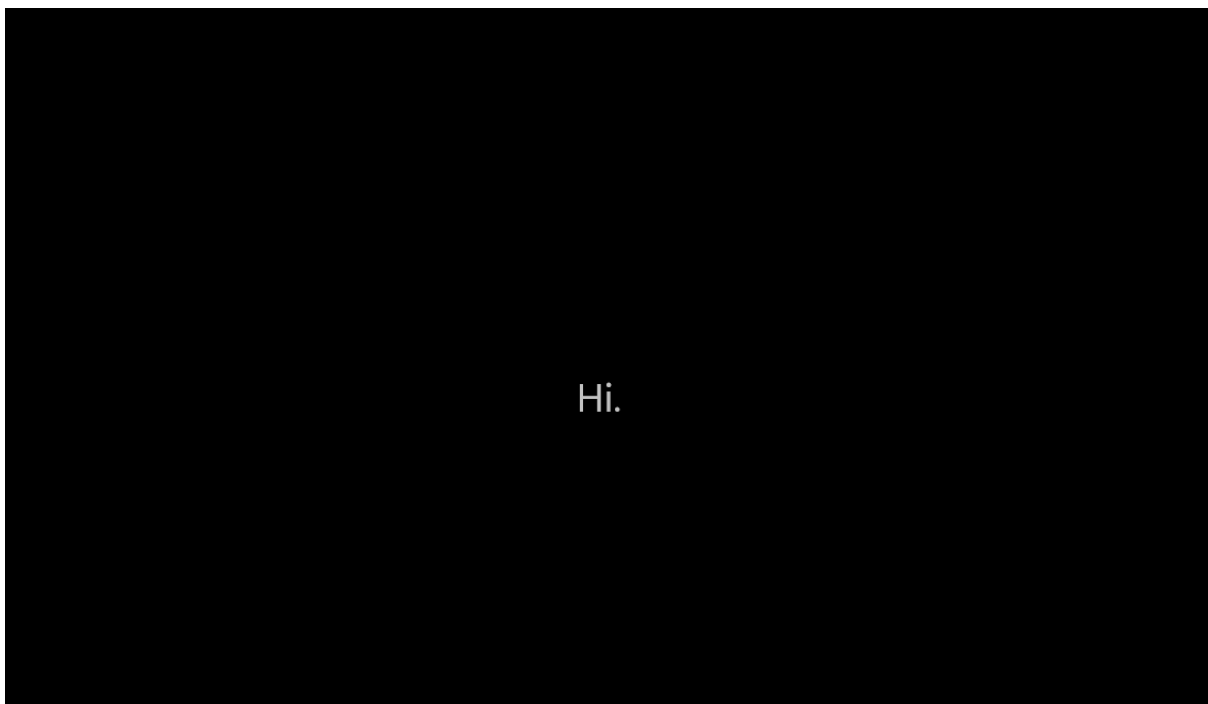

After wait for a long time, now we got a windows 11:

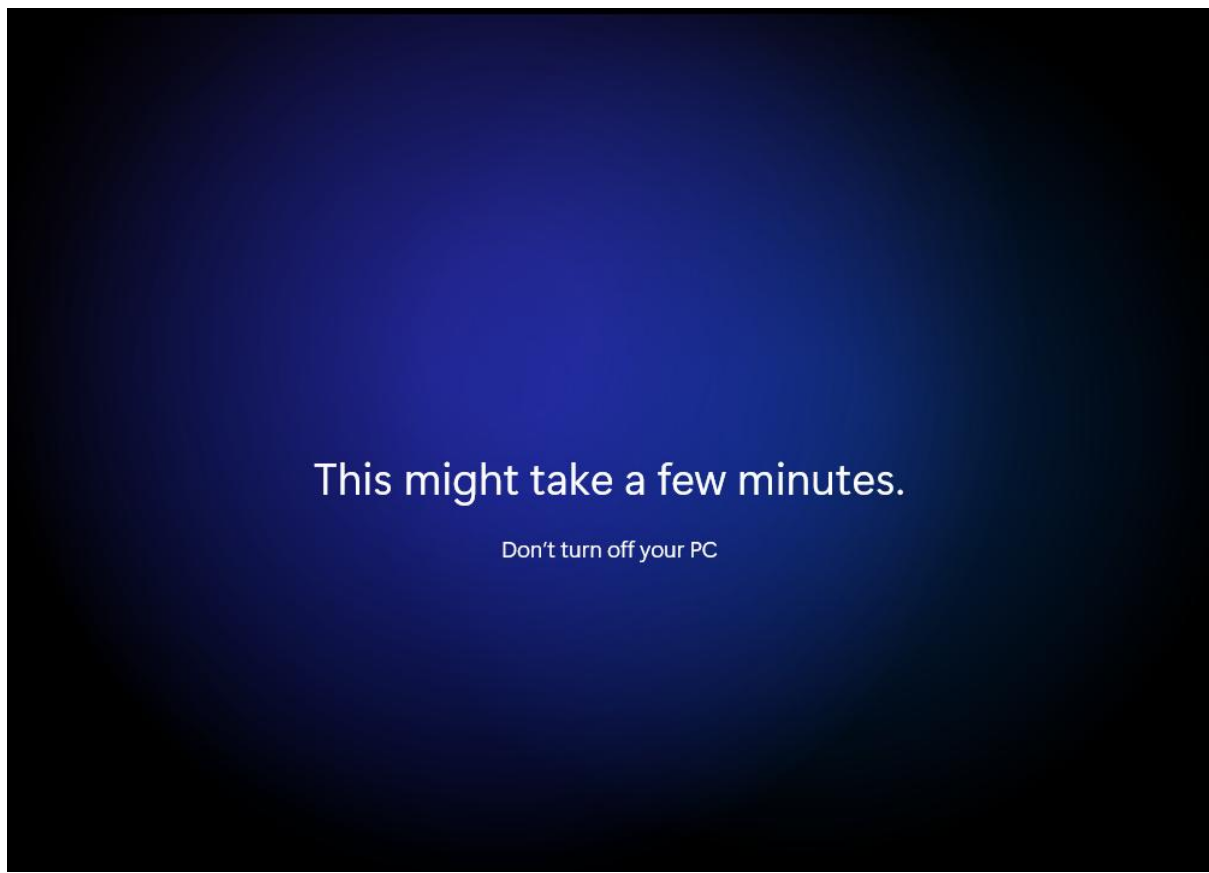

After we just input our **Password** we can login to windows:

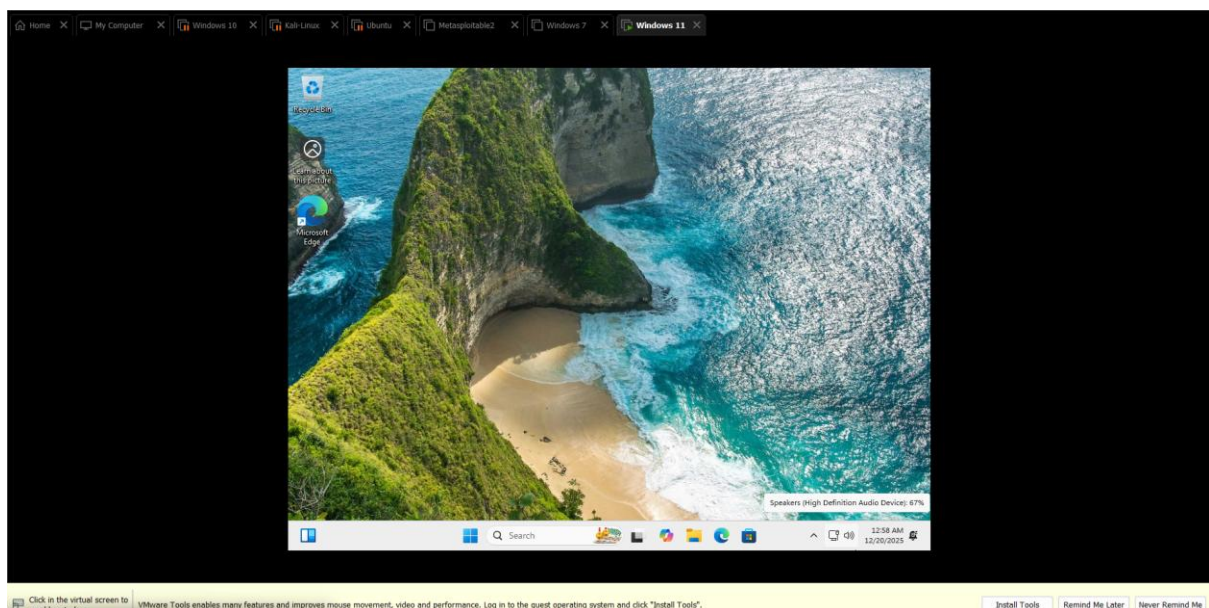

After login it will show this:

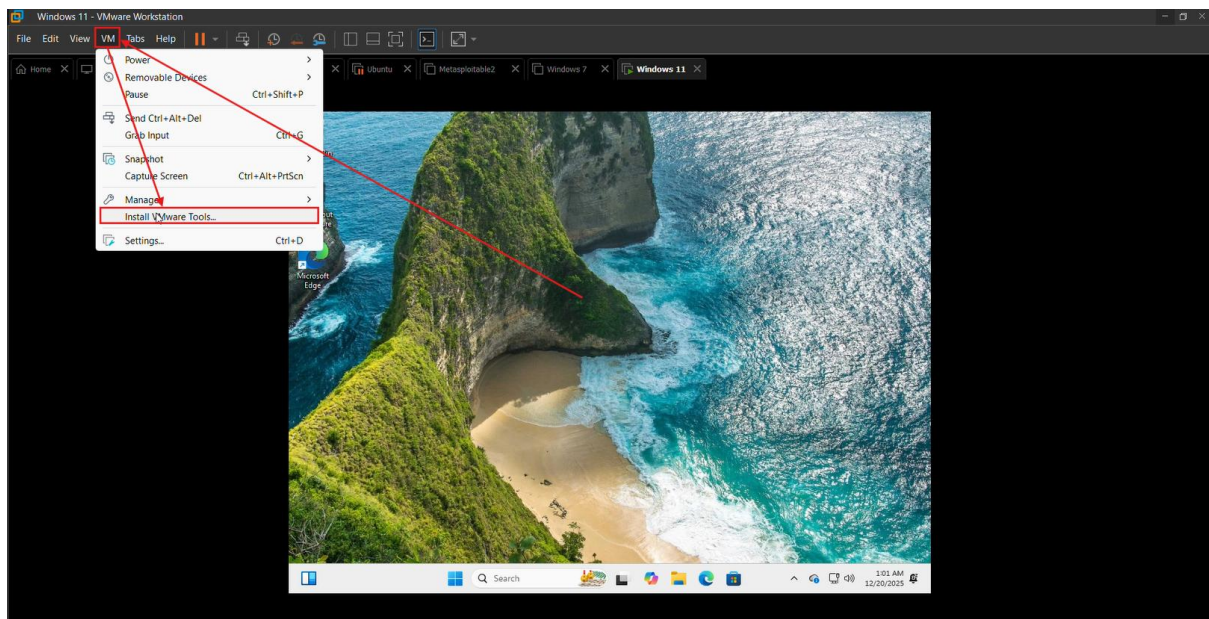

And wait until it appear all:

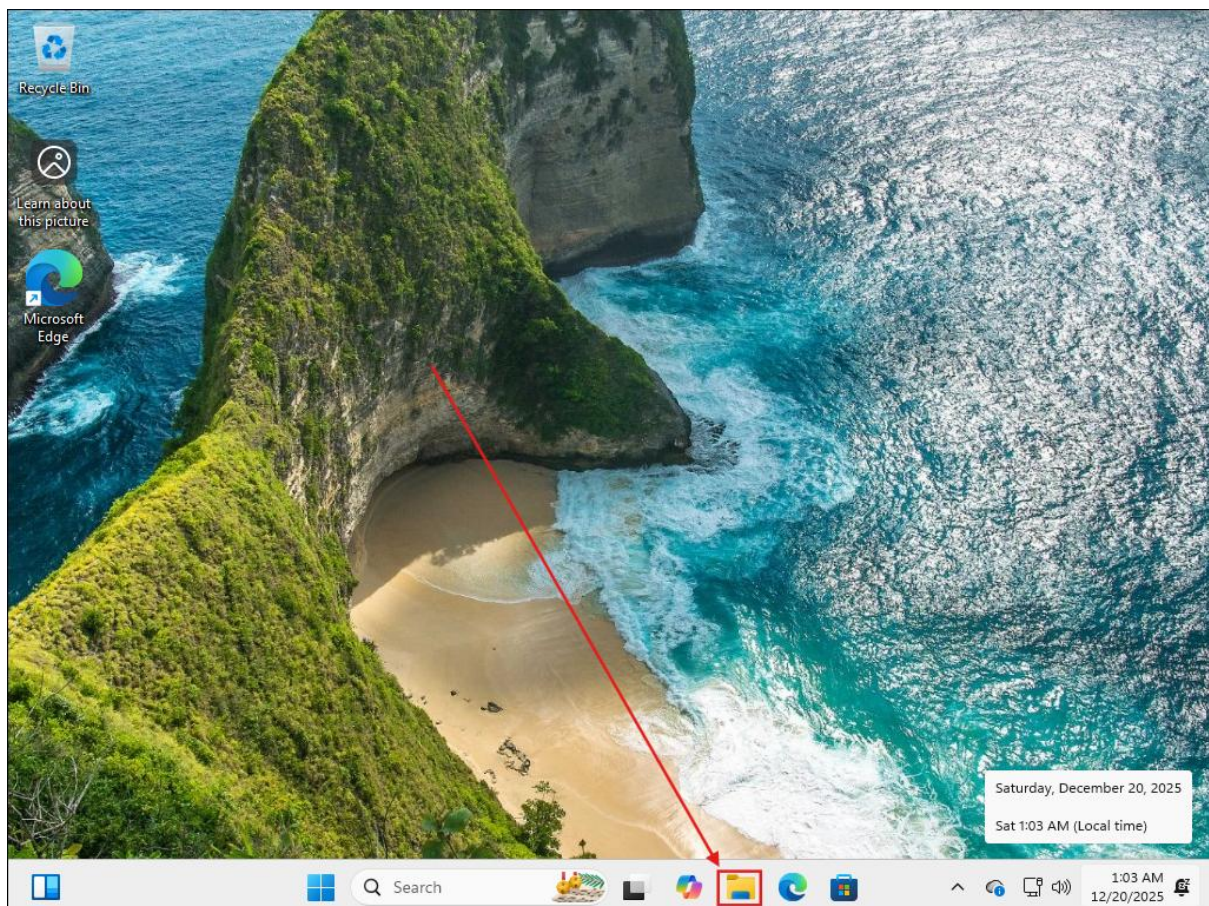

After it appeared all, now we got a new windows 11:

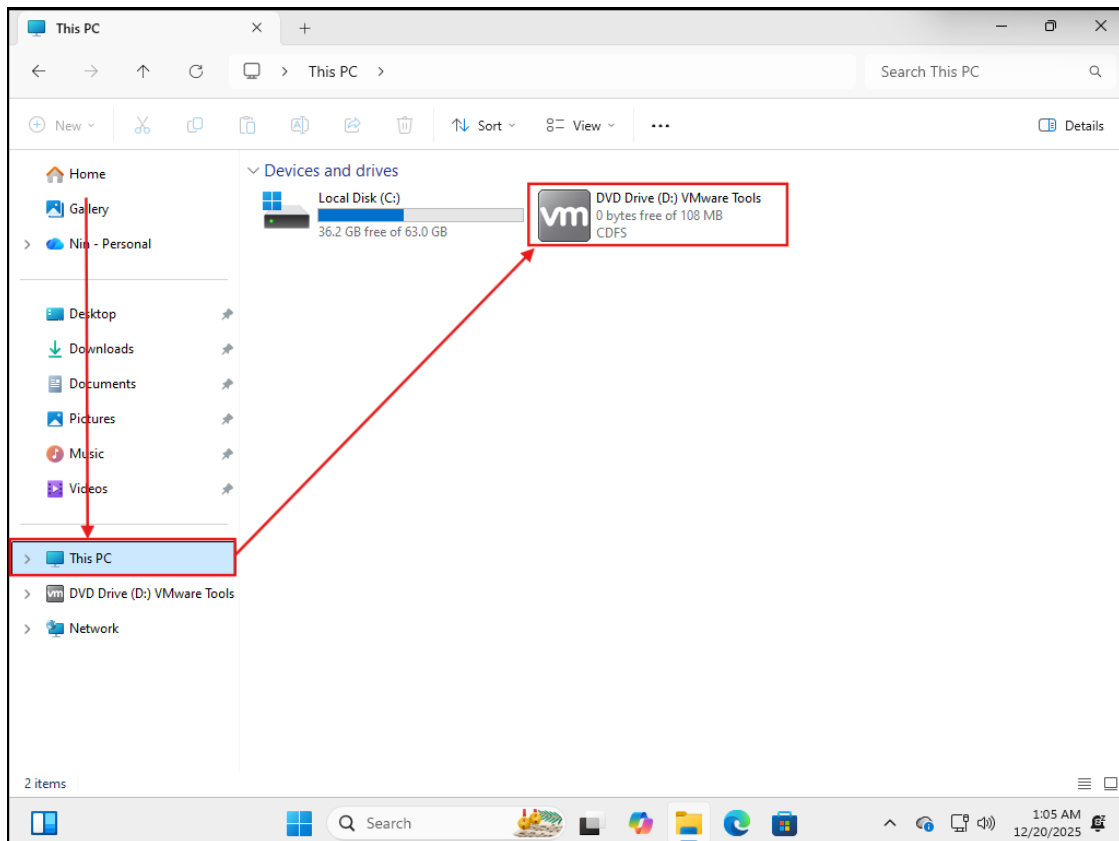

But in this we see it now are small, to make it big and full screen:

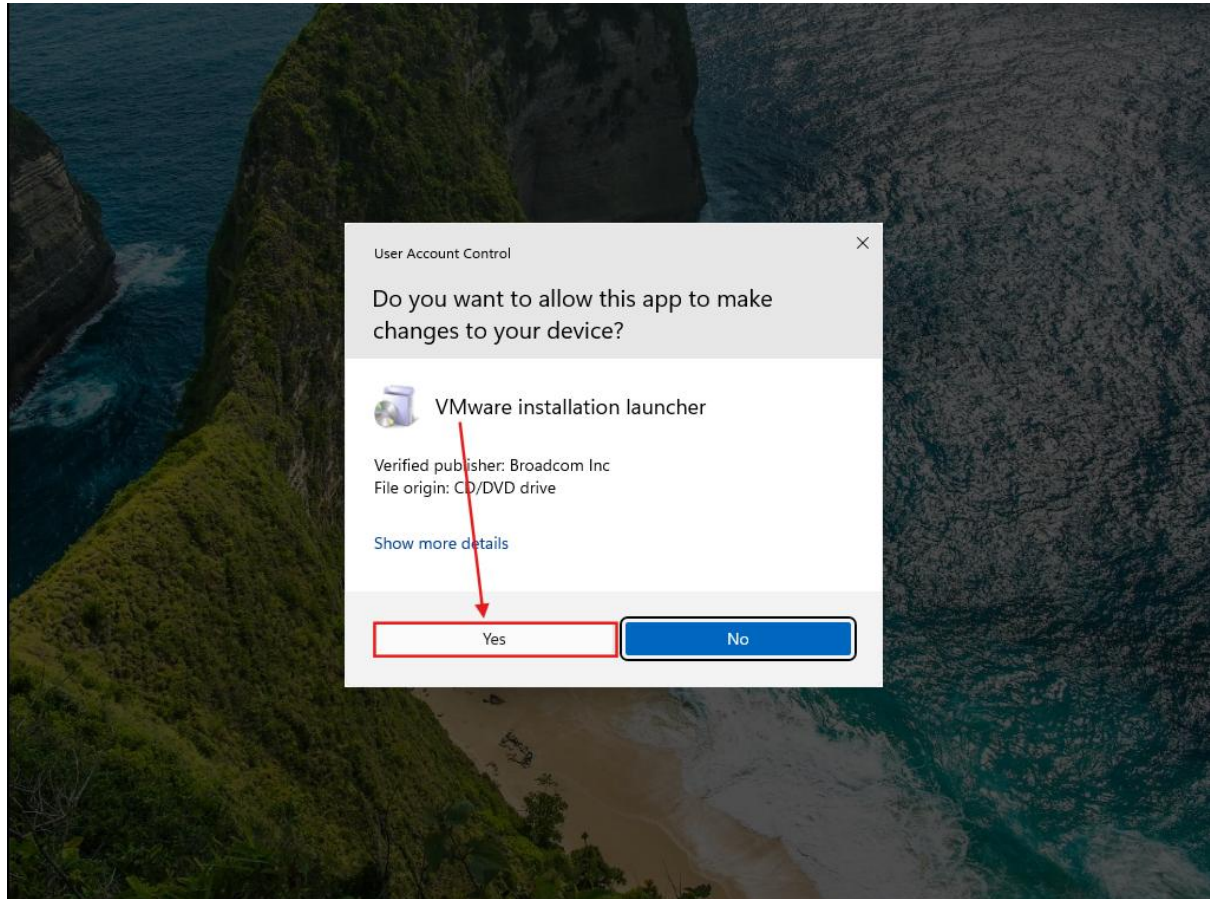

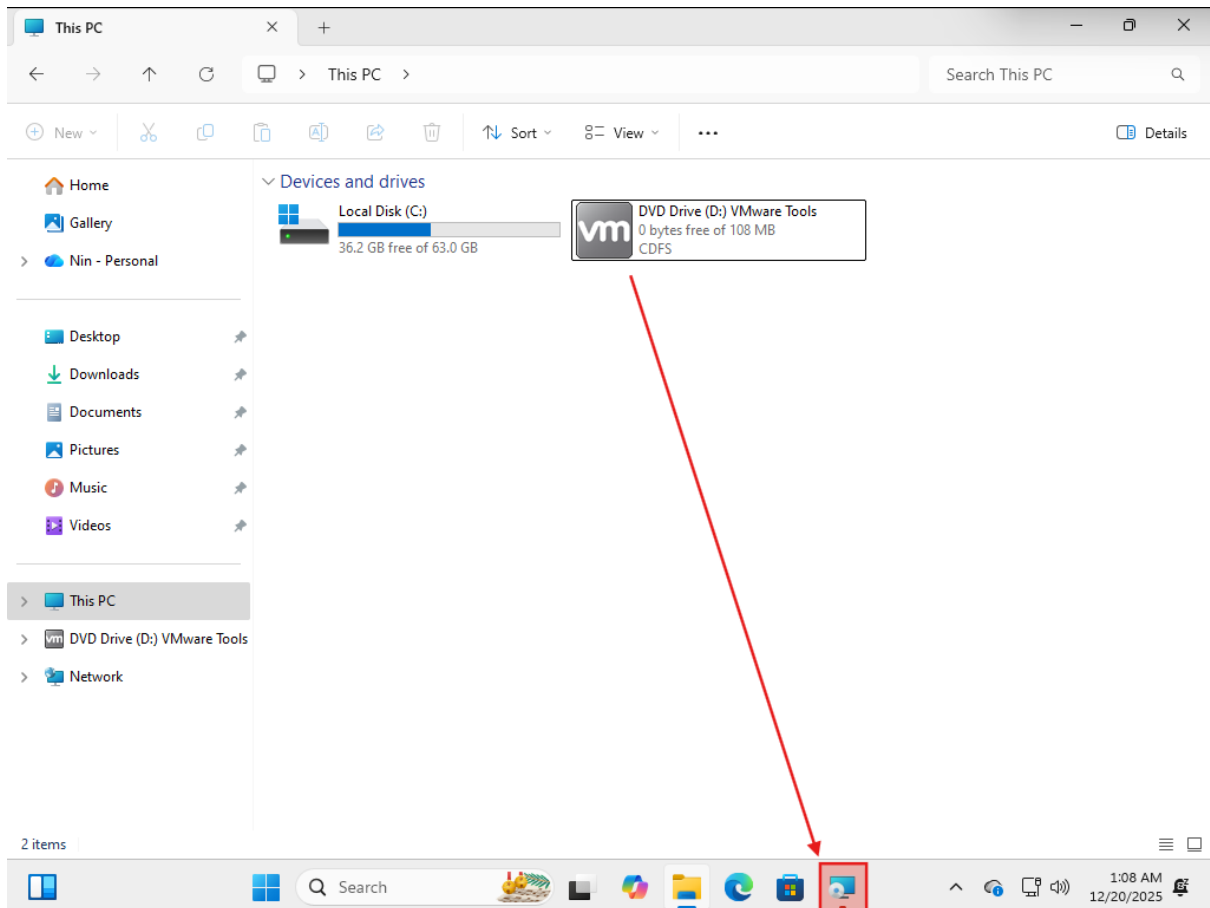

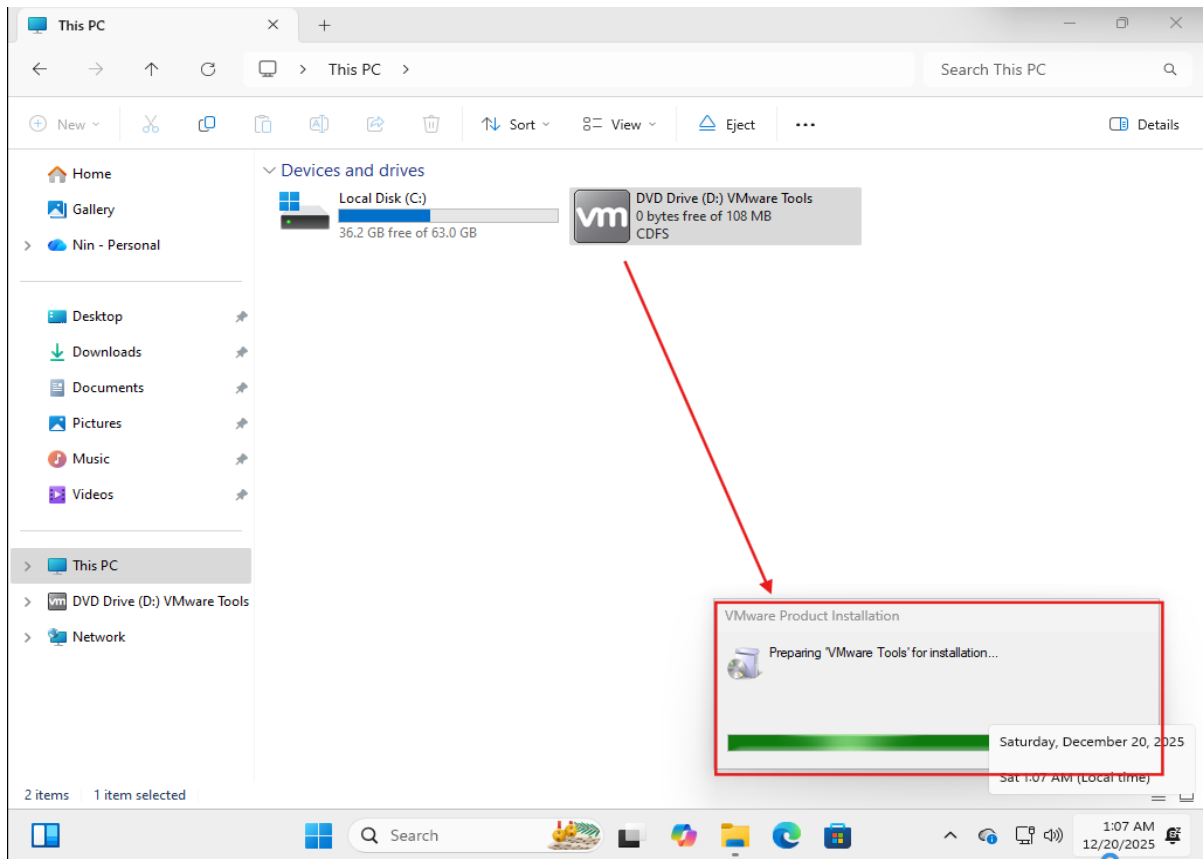

After back to our windows 11 on VM:

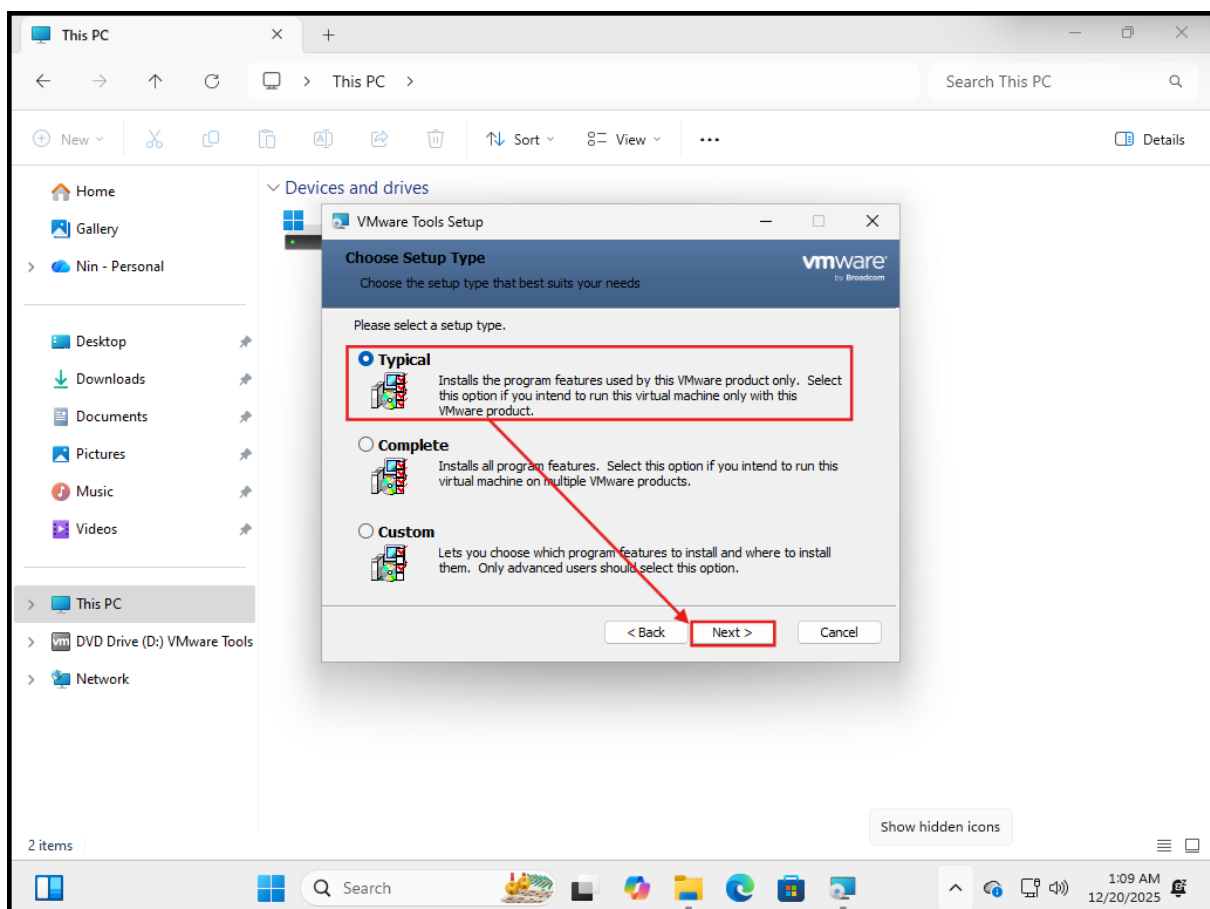

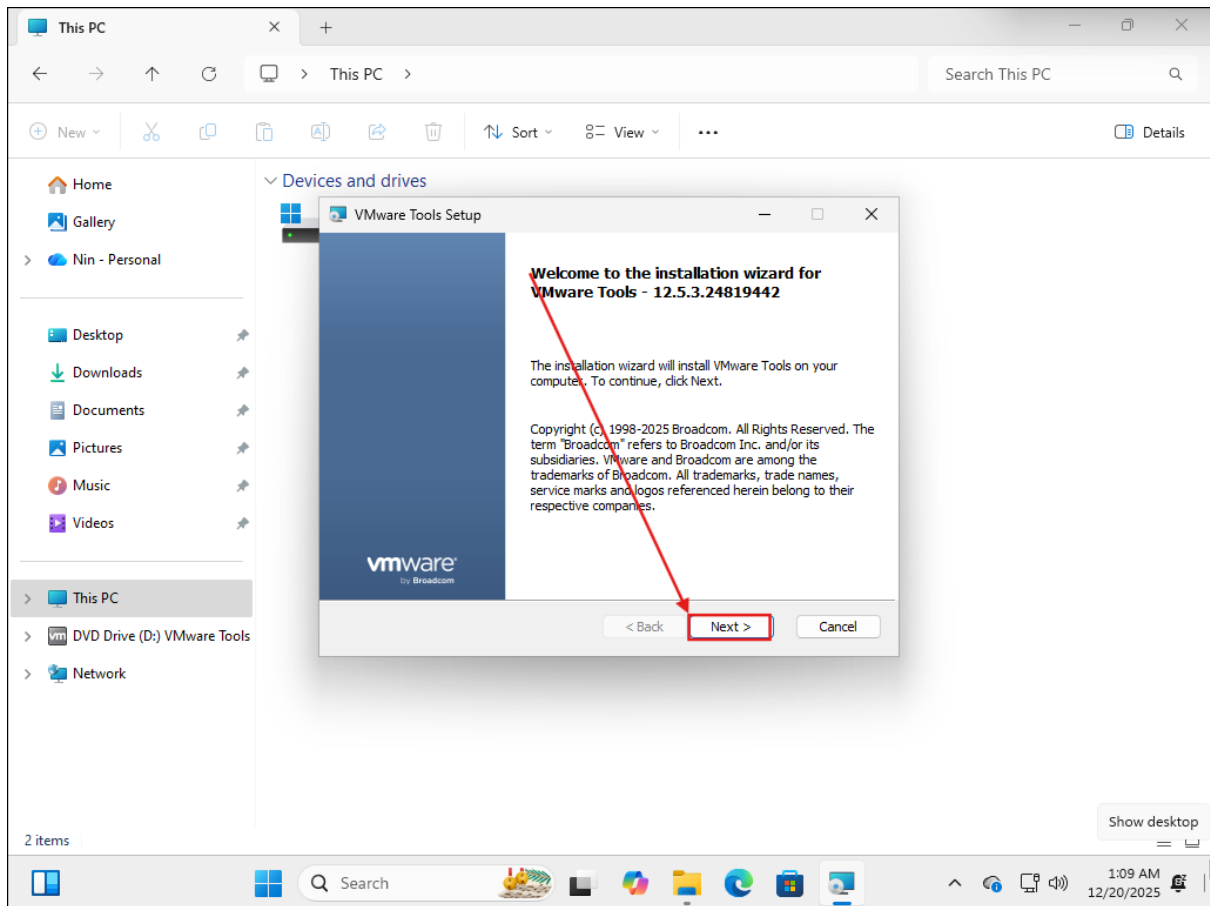

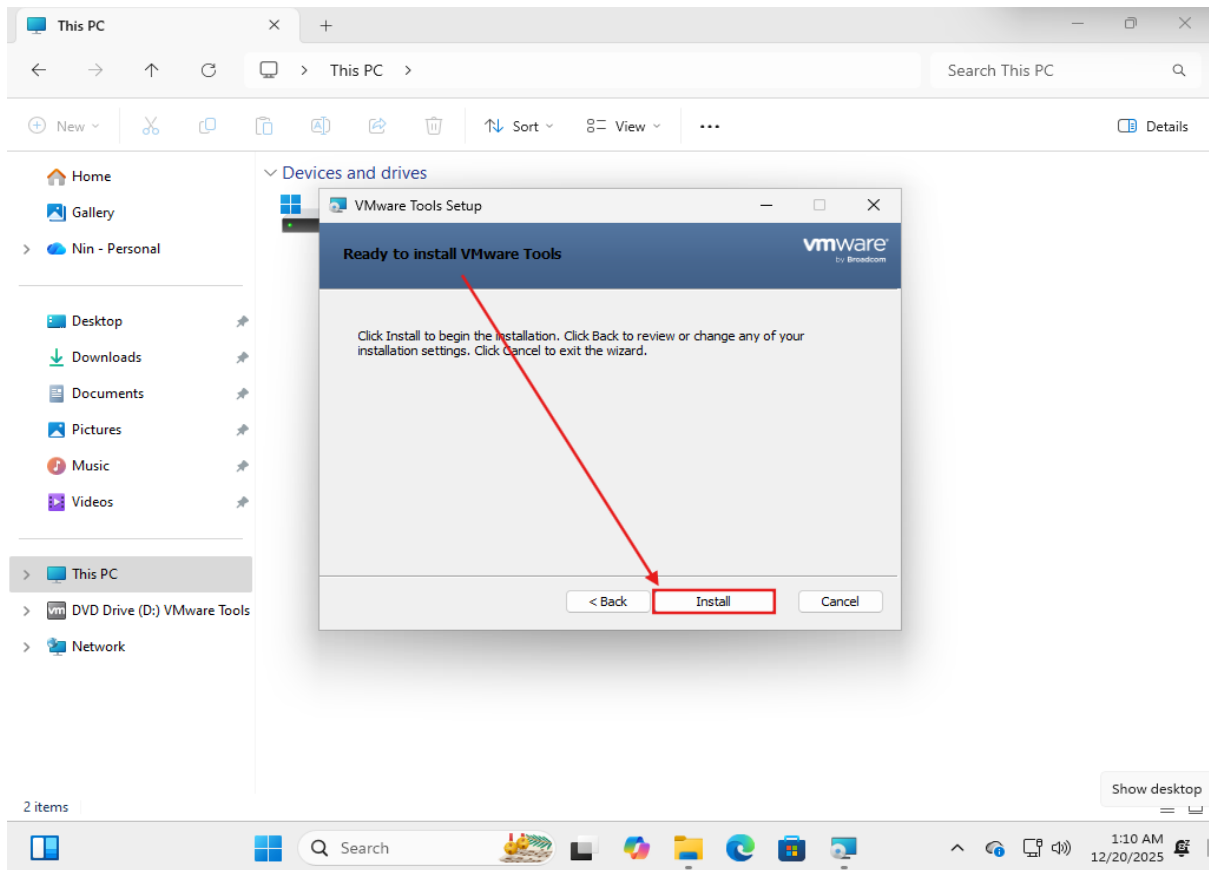

After just **Double-Click** on it -> click **OK**:

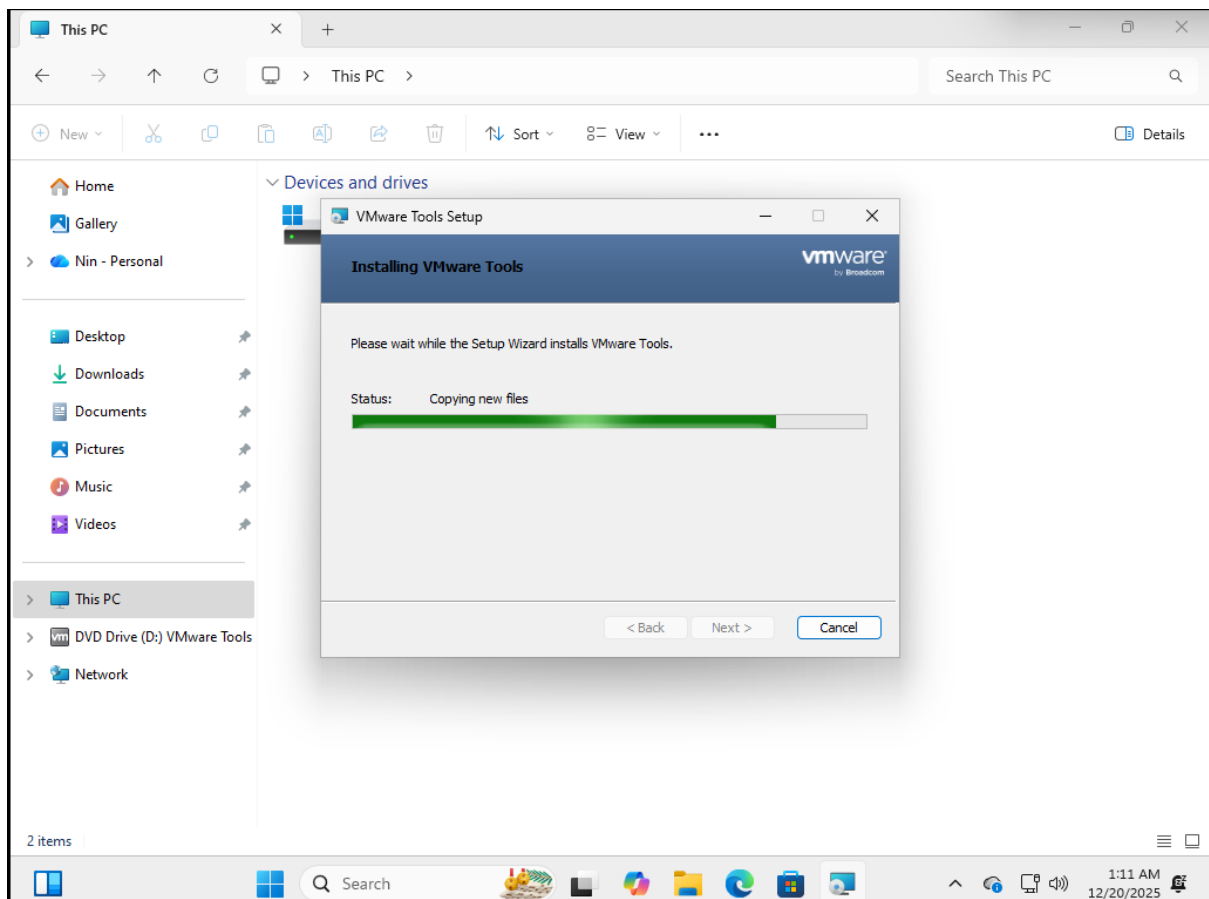

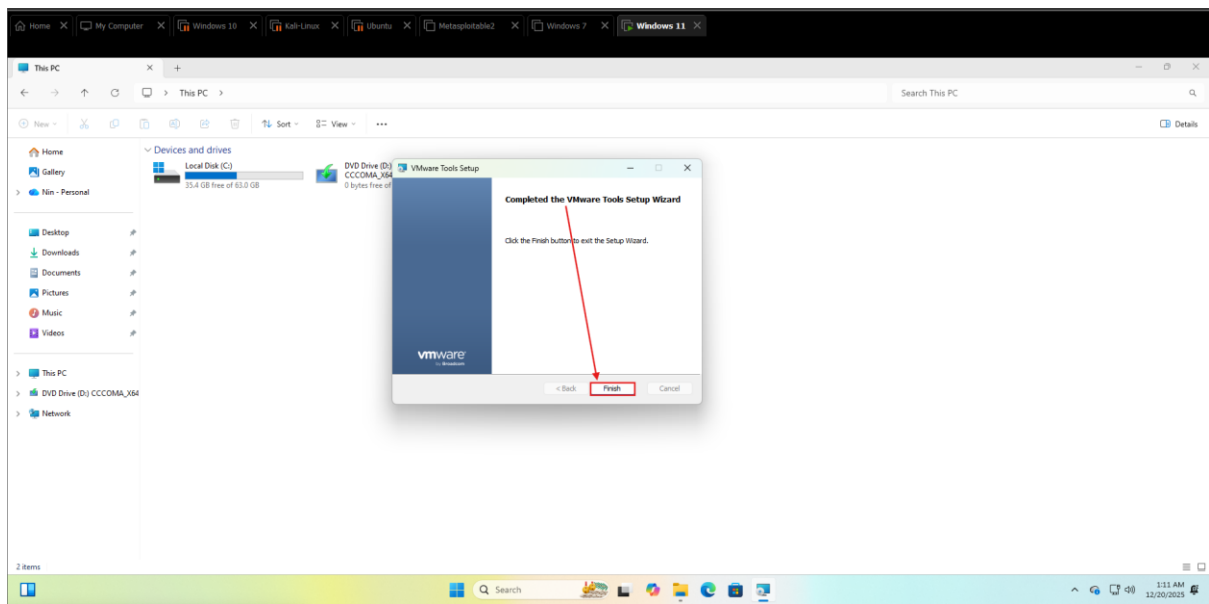

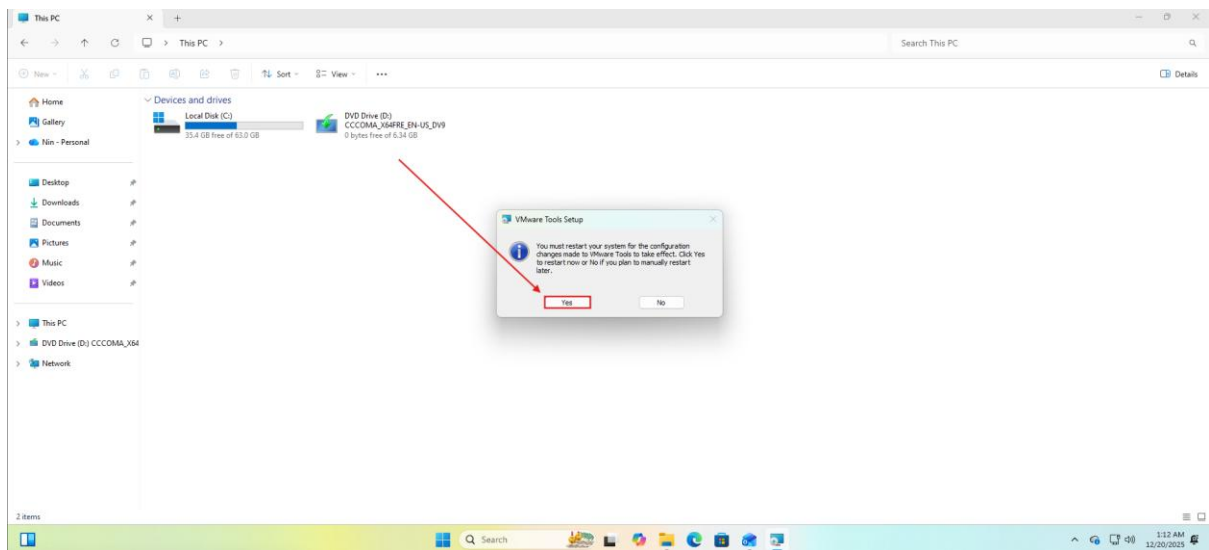

After wait until it full:

Now we can see full screen:

After click **Restart** it:

Now we got a new Windows 11 on VMware and see full screen.
